

Hermetically Sealed, Transistor Output Optocouplers for Analog and Digital Applications

Technical Data

4N55*	HCPL-257K
5962-87679	HCPL-655X
HCPL-553X	5962-90854
HCPL-653X	HCPL-550X

*See matrix for available extensions.

Features

- Dual Marked with Device Part Number and DSCC Drawing Number
- Manufactured and Tested on a MIL-PRF-38534 Certified Line
- QML-38534, Class H and K
- Five Hermetically Sealed Package Configurations
- Performance Guaranteed, Over -55°C to +125°C
- High Speed: Typically 400 kBit/s
- 9 MHz Bandwidth
- Open Collector Output
- 2-18 Volt V_{CC} Range
- 1500 Vdc Withstand Test Voltage
- High Radiation Immunity
- 6N135, 6N136, HCPL-2530/-2531, Function Compatibility
- Reliability Data

Applications

- Military and Space
- High Reliability Systems
- Vehicle Command, Control, Life Critical Systems
- Line Receivers
- Switching Power Supply
- Voltage Level Shifting

- Analog Signal Ground Isolation (see Figures 7, 8, and 13)
- Isolated Input Line Receiver
- Isolated Output Line Driver
- Logic Ground Isolation
- Harsh Industrial Environments
- Isolation for Test Equipment Systems

Description

These units are single, dual and quad channel, hermetically sealed optocouplers. The products are capable of operation and storage over the full military temperature range and can be purchased as either standard product or with full MIL-PRF-38534 Class Level H or K testing or from the appropriate DSCC Drawing. All devices are manufactured and tested on a MIL-PRF-38534 certified line and are included in the DSCC Qualified Manufacturers List QML-38534 for Hybrid Microcircuits.

Each channel contains a GaAsP light emitting diode which is optically coupled to an integrated photon detector. Separate connections for the photodiodes and output transistor collectors

improve the speed up to a hundred times that of a conventional phototransistor optocoupler by reducing the base-collector capacitance.

These devices are suitable for wide bandwidth analog applications, as well as for interfacing TTL to LSTTL or CMOS. Current Transfer Ratio (CTR) is 9% minimum at $I_F = 16$ mA. The 18 V V_{CC}

Truth Table

Functional Diagram

Multiple Channel Devices Available

The connection of a 0.1 μ F bypass capacitor between V_{CC} and GND is recommended.

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

capability will enable the designer to interface any TTL family to CMOS. The availability of the base lead allows optimized gain/bandwidth adjustment in analog applications. The shallow depth of the IC photodiode provides better radiation immunity than conventional phototransistor couplers.

These products are also available with the transistor base node connected to improve common mode noise immunity and ESD susceptibility. In addition, higher CTR minimums are available by special request.

Package styles for these parts are 8 and 16 pin DIP through hole (case outlines P and E respectively), 16 pin DIP flat pack (case outline F), and leadless ceramic chip carrier (case outline 2). Devices may be purchased with a variety of lead bend and plating options, see Selection Guide Table for details. Standard Microcircuit Drawing (SMD) parts are available for each package and lead style.

Because the same functional die (emitters and detectors) are used for each channel of each device

listed in this data sheet, absolute maximum ratings, recommended operating conditions, electrical specifications, and performance characteristics shown in the figures are identical for all parts. Occasional exceptions exist due to package variations and limitations and are as noted. Additionally, the same package assembly processes and materials are used in all devices. These similarities give justification for the use of data obtained from one part to represent other part's performance for die related reliability and certain limited radiation test results.

Hermetic Optocoupler Options

Option	Description
100	<p>Surface mountable hermetic optocoupler with leads trimmed for butt joint assembly. This option is available on commercial and hi-rel product in 8 and 16 pin DIP (see drawings below for details).</p>  <p>NOTE: DIMENSIONS IN MILLIMETERS (INCHES).</p>
200	<p>Lead finish is solder dipped rather than gold plated. This option is available on commercial and hi-rel product in 8 and 16 pin DIP. DSCC drawing part numbers contain provisions for lead finish. All leadless chip carrier devices are delivered with solder dipped terminals as a standard feature.</p>
300	<p>Surface mountable hermetic optocoupler with leads cut and bent for gull wing assembly. This option is available on commercial and hi-rel product in 8 and 16 pin DIP (see drawings below for details). This option has solder dipped leads.</p>  <p>NOTE: DIMENSIONS IN MILLIMETERS (INCHES).</p>

Absolute Maximum Ratings

(No derating required up to +125°C)

Storage Temperature Range, T_S	-65°C to +150°C
Operating Temperature, T_A	-55°C to +125°C
Case Temperature, T_C	+170°C
Junction Temperature, T_J	+175°C
Lead Solder Temperature	260°C for 10 s
Peak Forward Input Current, (each channel, ≤ 1 ms duration), $I_{F PK}$	40 mA
Average Input Forward Current, $I_{F AVG}$ (each channel)	20 mA
Reverse Input Voltage, BV_R	See Electrical Characteristics
Average Output Current, I_O (each channel)	8 mA
Peak Output Current, I_O (each channel)	16 mA
Supply Voltage, V_{CC}	-0.5 V to 20 V
Output Voltage, V_O (each channel)	-0.5 V to 20 V
Input Power Dissipation (each channel)	36 mW
Output Power Dissipation (each channel)	50 mW
Package Power Dissipation, P_D (each channel)	200 mW

Single Channel 8 Pin, Dual Channel 16 Pin, and LCCC Only

Emitter Base Reverse Voltage, V_{EBO}	3.0 V
Base Current, I_B (each channel)	5 mA

Notes:

- Each channel of a multi-channel device.
- Current Transfer Ratio is defined as the ratio of output collector current, I_O , to the forward LED input current, I_F , times 100%. CTR is known to degrade slightly over the unit's lifetime as a function of input current, temperature, signal duty cycle, and system on time. Refer to Application Note 1002 for more detail. In short, it is recommended that designers allow at least 20-25% guardband for CTR degradation.
- All devices are considered two-terminal devices; measured between all input leads or terminals shorted together and all output leads or terminals shorted together.
- The 4N55, 4N55/883B, HCPL-257K, HCPL-6530, HCPL-6531, and HCPL-653K dual channel parts function as two independent single channel units. Use the single channel parameter limits. $I_F = 0\text{ mA}$ for channel under test and $I_F = 20\text{ mA}$ for other channels.
- Measured between adjacent input pairs shorted together for each multichannel device.
- t_{PHL} propagation delay is measured from the 50% point on the leading edge of the input pulse to the 1.5 V point on the leading edge of the output pulse. The t_{PLH} propagation delay is measured from the 50% point on the trailing edge of the input pulse to the 1.5 V point on the trailing edge of the output pulse.
- CM_L is the maximum rate of rise of the common mode voltage that can be sustained with the output voltage in the logic low state ($V_O < 0.8\text{ V}$). CM_H is the maximum rate of fall of the common mode voltage that can be sustained with the output voltage in the logic high state ($V_O > 2.0\text{ V}$).
- Bandwidth is the frequency at which the ac output voltage is 3 dB below the low frequency asymptote. For the HCPL-5530 the typical bandwidth is 2 MHz.
- This is a momentary withstand test, not an operating condition.
- Higher CTR minimums are available to support special applications.
- Measured between each input pair shorted together and all output connections for that channel shorted together.
- Standard parts receive 100% testing at 25°C (Subgroups 1 and 9). SMD and 883B parts receive 100% testing at 25, 125, and -55°C (Subgroups 1 and 9, 2 and 10, 3 and 11, respectively).
- Not required for 4N55, 4N55/883B, HCPL-257K, 5962-8767901, and 5962-8767905 types.
- Required for 4N55, 4N55/883B, HCPL-257K, 5962-8767901, and 5962-8767905 types only.

Description

The schematic uses a dual-channel, high-speed optocoupler (HCPL-5530) to function as a servo type dc isolation amplifier. This circuit operates on the principle that two optocouplers will track each other if their gain changes by the same amount over a specific operating region.

Performance of Circuit

- 1% linearity for 10 V peak-to-peak dynamic range
- Gain drift: -0.03%/°C
- Offset Drift: $\pm 1 \text{ mV}/^\circ\text{C}$
- 25 kHz bandwidth (limited by Op-Amps U1, U2)

MIL-PRF-38534 Class H, Class K, and DSCC SMD Test Program

Agilent's Hi-Rel Optocouplers are in compliance with MIL-PRF-38534 Classes H and K. Class H and Class K devices are also in compliance with DSCC drawings 5962-87679, and 5962-90854.

Testing consists of 100% screening and quality conformance inspection to MIL-PRF-38534.
