FUNCTIONAL DESCRIPTION

The 1518-series device is a fixed, single-input, five-output, passive delay line. The signal input (IN) is reproduced at the outputs (T1-T5) in equal increments. The delay from IN to T5 (T_D) and the characteristic impedance of the line (Z) are determined by the dash number. The rise time (T_R) of the line is 30% of T_D , and the 3dB bandwidth is given by $1.05 / T_D$. The device is available in a 14-pin SMD with two pinout options.

Part numbers are constructed according to the scheme shown at right. For example, 1518-101-500A is a 100ns, 50 Ω delay line with pinout code A. Similarly, 1518-151-501 a is 150ns, 500 Ω delay line with standard pinout.
