#### **Triple Line Drivers / Receivers**

The HD29468 features line drivers and receivers for unbalanced transmissions, which meet the specs of IBM 360 and 370. This device has three drivers and receivers in one package. Input of driver and output of receiver are compatible with low power schottky TTL circuit and operates from a single 5 V power supply. The driver has two types of enable inputs. Sprius noise can be prevented by grounding either input when power supply is throw or cut off. The outputs are protected from short circuit and the wired logic is available due to emitter follower from for party

line data bus applications. The device operates at high speed. Low to high level and high to low level propagation delay times defference are 10 ns max.

#### **Absolute Maximum Ratings**

Item	Symbol	Ratings	Unit	
Supply Voltage	Vcc	+7	V	
Driver Input Voltage	Vid	-0.5 to +7	V	
Driver Output Voltage	Vod	-0.5 to +7	V	
Receiver Input Voltage	Vir	-0.5 to +7	V	
Power Dissipation (Ta = 25 °C)	<sup>*1</sup> DP	1000	mW	
	FP	785		
Operating Temperature	Ta	0 to +75	°C	
Storage Temperature	Tstg	-65 to +150	°C	

Notes: 1. The above data were taken by the  $\Delta VBE$  method,mounting on a glass epoxy board

 $(40 \times 40 \times 1.6 \text{ mm})$  of 10 % wiring density.

2. The absolute maximum ratings are values which must not individually be exceeded, and furthermore, no two of which may be realized at the same time.
