

October 1987 Revised January 1999

# CD40192BC • CD40193BC Synchronous 4-Bit Up/Down Decade Counter • Synchronous 4-Bit Up/Down Binary Counter

# **General Description**

The CD40192BC and CD40193BC up/down counters are monolithic complementary MOS (CMOS) integrated circuits. The CD40192BC is a BCD counter, while the CD40193BC is a binary counter.

Counting up and counting down is performed by two count inputs, one being held HIGH while the other is clocked. The outputs change on the positive-going transition of this clock.

These counters feature preset inputs that are enabled when load is a logical "0" and a clear which forces all outputs to "0" when it is at logical "1". The counters also have carry and borrow outputs so that they can be cascaded using no external circuitry.

All inputs are protected against damage due to static discharge by clamps to  $V_{DD}$  and  $V_{SS}$ .

## **Features**

- Wide supply voltage range: 3V to 15V
- High noise immunity: 0.45 V<sub>DD</sub> (typ.)
- Low power TTL compatibility: Fan out of 2 driving 74L or 1 driving 74LS
- Carry and borrow outputs for easy expansion to N-bit by cascading
- Asynchronous clear
- Equivalent to: MM74C192 and MM74C193

# **Ordering Code:**

Order Number	Package Number	Package Description
CD40192BCN	N16E	16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide
CD40193BCN	N16E	16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide
CD40193BCM	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow Body

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

		Count Up, Count		10	15	pF
		Down and Clear				
C <sub>PD</sub>	Power Dissipation Capacity	(Note 5)		100		pF

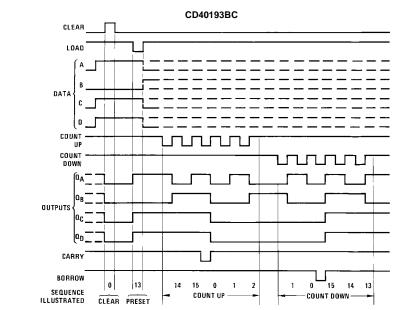

Note 5: C<sub>PD</sub> determines the no load AC power consumption of any CMOS device. For complete explanation, see Family Characteristics application note,

# **Timing Diagrams**

### Sequence:

- Clear outputs to zero.
- 2. Load (preset) to BCD seven.
- 3. Count up to eight, nine, carry, zero, one and two.
- 4. Count down to one, zero, borrow, nine, eight and seven.

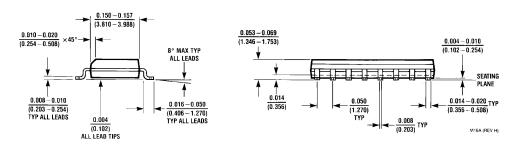

## Sequence:

- Clear outputs to zero.
- 2. Load (preset) to binary thirteen.
- 3. Count up to fourteen, fifteen, carry, zero, one and two.
- 4. Count down to one, zero, borrow, fifteen, fourteen and thirteen.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
