## Photosensor Modules H7422 Series

Heatsink with fan (A7423) sold separately

The H7422 series are photosensor modules with an internal high-voltage power supply circuit and a cooler installed to the metal package photomultiplier tube. Efficient cooling was achieved by placing the cooler near the photomultiplier tube to reduce thermal noise emitted from the photocathode and a high S/N ratio can be obtained even at extremely low light levels.

The H7422-40 has high sensitivity in the 300 nm to 720 nm wavelengths. The H7422-50 is sensitive along a wide spectral range from 380 nm to 890 nm. The H7422-01, H7422-02 and H7422-20 have a maximum output current value of 100  $\mu$ A and so are extremely effective when measurements are needed over a wide dynamic range. The photomultiplier tube is maintained at a constant temperature by monitoring the output from a thermistor installed near the photomultiplier and then regulating the current to the thermoelectric cooler.

### Product Variations

Type No.	Spectral Response	Max. Output Signal Current	Features
H7422-40	300 nm to 720 nm	2 $\mu$ A	GaAsP photocathode, QE 40 % at peak wavelength, high gain (P type)
H7422P-40			For photon counting
H7422-50	380 nm to 890 nm	2 $\mu$ A	GaAs photocathode, QE 12 % at peak wavelength, high gain (P type)
H7422P-50			For photon counting
H7422-01	300 nm to 850 nm	100 $\mu$ A	Multialkali photocathode
H7422-02	300 nm to 870 nm		Infrared-extended multialkali photocathode
H7422-20	300 nm to 890 nm		Infrared-extended high-sensitivity multialkali photocathode

## H7422 Series option

### ● Heatsink with Fan A7423

The temperature of the H7422 outer case rises due to the thermoelectric cooler housed in the case. The A7423 heatsink efficiently radiates away this heat to prevent a temperature rise in the H7422. The A7423 can be easily installed onto the H7422 with four M3 screws. Apply a heat conductive grease onto the joint surface shared by the H7422 and A7423.

Parameter	Value	Unit
Input Voltage	12	V
Input Current	During Lock	140 mA
	During Operation	90 mA
Operating Voltage	10.2 to 13.8	V
Weight	120	g

### ● Signal Cable E1168-05

This signal cable is terminated with a BNC connector for easily connecting the H7422 to external equipment.

### ● Optical Fiber Adapter (FC Type) A7412

The A7412 is an FC type optical fiber connector that attaches to the light input window of the H7422. The A7412 can easily be secured in place with four M2 screws.

### ● C-Mount Adapter A7413

The A7413 mount adapter is used when a C-mount lens protruding 4 mm or more from the flange-back must be installed onto the H7422.

### ● Power Supply Unit with Temperature Control M9012

The M9012 is an on-board type power supply unit. By just connecting to 12 V supply, the M9012 provides power necessary to operate the H7422 series. The M9012 also controls the thermoelectric cooler in the H7422 series so that the output and noise can be maintained at constant levels even when the ambient temperature changes. The thermoelectric cooler and PMT operation can be controlled from an external device by connecting it to the I/O connector on the M9012.

### ● Power Supply Unit with Temperature Control C8137-02

The C8137-02 is a power supply unit with a temperature control function. Just connecting to an AC source of 100 V to 240 V generates the output voltages for the thermoelectric cooler and the A7423 fan, needed for operating the H7422. The photomultiplier tube temperature can be maintained to 0  $^{\circ}\text{C}$  by monitoring the thermistor and regulating the output current for the thermoelectric cooler. Control voltage can be varied by a knob on the front panel.

Parameter	Value	Unit
Max. Cooling Temperature ( $\Delta T$ )	35	$^{\circ}\text{C}$
Setting Cooling Temperature (preset at factory)	0	$^{\circ}\text{C}$
Input Voltage	AC 100 to AC 240	V
Input Voltage Frequency	50/60	Hz
Power Consumption	30	V·A
Main Circuit Output Voltage	+15	V
Max. Current for Thermoelectric Cooler	2.2	A
Output Voltage for Fan	12	V
Control Voltage Adjustment Range	0 to +0.9	V
Weight	1.1	kg
