

STANDARD SAW FILTERS (70MHz, 140MHz)

GENERAL DESCRIPTION

This family of SAW (surface acoustic wave) filters is available in standard center frequencies of 70MHz and 140MHz. Bandwidths range from 0.25MHz to very wide bandwidths (up to 56MHz). These filters are ideal for general radio applications where the common IF is 70MHz or 140MHz and high rejection is needed.

APPLICATIONS

- Military radios
- Telemetry systems
- Communication and navigation
- Test equipment
- Repeaters

FEATURES

- SAW 3dB bandwidths from 0.25MHz to 56MHz
- Insertion loss ranging from 20dB to 28dB
- High rejection to remove spurious signals
- Low amplitude ripple and group delay variation
- Steep skirts optimized for high close-in rejection
- Packages inc.: DIP-BT (27 x 12.6mm), and DIP-O (22 x 13mm)
