DESCRIPTION:

The FCT162H272AT/CT/ET synchronous tri-port bus exchangers are high-speed, bidirectional, 12-bit, registered, bus

multiplexers for use in synchronous memory interleaving applications. All registers have a common clock and use a clock enable ($\overline{\text{CE}}_{\text{xxx}}$) on each data register to control data sequencing. The output enables and mux select ($\overline{\text{OEA}}$, $\overline{\text{OEB}}$ and SEL) are also under synchronous control allowing direction changes to be edge triggered events.

The tri-port bus exchanger has three 12-bit ports. Data may be transferred between the A port and either/both of the B ports. The clock enable ($\overline{\text{CE}}_{1\text{B}}$, $\overline{\text{CE}}_{2\text{B}}$, $\overline{\text{CEA}}_{1\text{B}}$ and $\overline{\text{CEA}}_{2\text{B}}$) inputs control the data storage. Both B ports have a common output enable ($\overline{\text{OEB}}$) to aid in synchronously loading the B registers from the B port.

The FCT162H272AT/CT/ET have balanced output drive with current limiting resistors. This offers low ground bounce, minimal undershoot, and controlled output fall times-reducing the need for external series terminating resistors.

The FCT162H272AT/CT/ET have "Bus Hold" which retains the input's last state whenever the input goes to high impedance. This prevents "floating" inputs and eliminates the need for pull-up/down resistors.
