

**130MHz CDMA/AMPS Quadrature Modulator and AGC**

The HFA3767 is a monolithic bipolar quadrature modulator with gain control for CDMA/AMPS cellular applications. An upconverter quadrature mixer and an output gain control stage with better

than 70dB of dynamic range are integrated in the design. A local oscillator input requires low drive levels and a divide by two phase shifter with duty cycle compensation achieves excellent phase and amplitude balance properties. The HFA3767 is one of the four chips in the PRISM™ chip set and is housed in a 20 lead SSOP package ideally suited to cellular handset applications.

**Ordering Information**

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HFA3767IA	-40 to 85	20 Ld SSOP	M20.15
HFA3767IA96	-40 to 85	Tape and Reel	

**Simplified Block Diagram**

**Features**

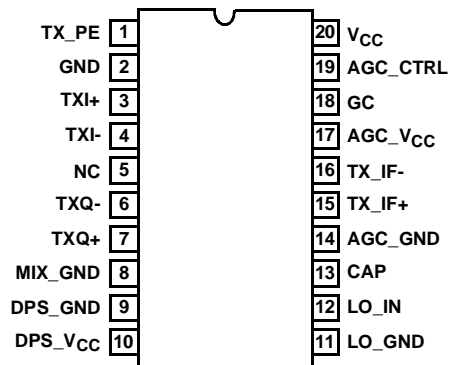

- I/Q Amplitude and Phase Balance . . . . . 0.5dB, 2°
- 130MHz AGC Amplifier/Attenuator range . . . . . >70dB
- Low LO Drive Level . . . . . -10dBm
- Power Enable/Disable Control
- Single Supply Battery Operation . . . . . 2.7 to 3.3V

**Applications**

- IS95A CDMA/AMPS Dual Mode Handsets
- Wideband CDMA Handsets
- Full Duplex Transceivers
- CDMA/TDMA Packet Protocol Radios
- Portable Battery Powered Equipment

**Pinout**

**HFA3767 (SSOP) TOP VIEW**

**Pin Descriptions**

PIN NUMBER	NAME	DESCRIPTION
1	TX_PE	Power enable control input. HIGH for normal operation. LOW for power down.
2	GND	Bias and AGC control ground return.
3	TXI+	Positive I channel baseband input. Requires a 1.2VDC common mode bias voltage.
4	TXI-	Negative I channel baseband input. Requires a 1.2VDC common mode bias voltage.
5	NC	No connect pin. Tie to ground to improve isolation from I to Q channels.
6	TXQ-	Negative QI channel baseband input. Requires a 1.2VDC common mode bias voltage.
7	TXQ+	Positive Q channel baseband input. Requires a 1.2VDC common mode bias voltage.
8	MIX_GND	Quadrature Mixers ground return.
9	DPS_GND	Digital Phase shifter ground return.
10	DPS_VCC	Digital Phase Shifter Power Supply. Use high quality RF decoupling capacitors right at the pin.
11	LO_GND	Local Oscillator Input ground return.
12	LO_IN	Local Oscillator Current Input. Use a 50Ω power to current converter. See applications diagram.
13	CAP	AGC Bias circuit filter capacitor. Typical value of 1000pF to 10000pF.
14	AGC_GND	AGC circuit ground return.
15	TX_IF+	Positive IF output port. Requires a DC return to V <sub>CC</sub> thru a choke or match inductor.
16	TX_IF-	Negative IF output port. Requires a DC return to V <sub>CC</sub> thru a choke or match inductor.
17	AGC_VCC	AGC circuit Power Supply. Use high quality RF decoupling capacitors right at the pin.
18	GCT	Gain and temperature compensation external resistor. See applications diagram.
19	AGC_CTRL	AGC control input. Require a 1% resistor divider at this input. See applications diagram.
20	V <sub>CC</sub>	Bias and AGC control Power Supply. Use high quality RF decoupling capacitors right at the pin.

# HFA3767

## Absolute Maximum Ratings $T_A = 25^{\circ}\text{C}$

Supply Voltage . . . . . -0.3V to +3.6V  
 Voltage on Any Other Pin . . . . . -0.3V to  $V_{CC} + 0.3\text{V}$

## Operating Conditions

Supply Voltage Range . . . . . 2.7V to 3.3V  
 Temperature Range . . . . .  $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$

## Thermal Information

Thermal Resistance (Typical, Note 1)  $\theta_{JA}$  ( $^{\circ}\text{C}/\text{W}$ )  
 SSOP Package . . . . . 115  
 Maximum Junction Temperature (Plastic Package) . . . . .  $150^{\circ}\text{C}$   
 Maximum Storage Temperature Range . . . . .  $-65^{\circ}\text{C} \leq T_A \leq 150^{\circ}\text{C}$   
 Maximum Lead Temperature (Soldering 10s) . . . . .  $300^{\circ}\text{C}$   
 (Lead Tips Only)

*CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.*

### NOTE:

- $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Electrical Specifications $V_{CC} = 2.7\text{V to } 3.3\text{V}$ , $\text{LO\_IN} = -10\text{dBm}$ at 260MHz. Refer to Applications diagram

PARAMETER	TEST CONDITIONS	(NOTE 2) TEST LEVEL	TEMP ( $^{\circ}\text{C}$ )	MIN	TYP	MAX	UNITS

**NOTES:**

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. Dimension "B" does not include dambar protrusion. Allowable dambar protrusion shall be 0.10mm (0.004 inch) total in excess of "B" dimension at maximum material condition.
10. Controlling dimension: INCHES. Converted millimeter dimensions are not necessarily exact.
