TRANSIENT ABSORPTION ZENER

UNIDIRECTIONAL AND BIDIRECTIONAL

FEATURES

- ECONOMICAL
- 1500 WATTS PEAK PULSE POWER DISSIPATION
- STAND OFF VOLTAGES FROM 5.5V - 171V
- UNIPOLAR OR BIPOLAR
- AVAILABLE IN CHIP FORM FOR HYBRID APPLICATION
- MULTI-CHIP BIDIRECTIONAL CELLS AVAILABLE

DESCRIPTION

This defines a series of silicon Transient Suppressors designed to protect voltage sensitive components from high energy voltage transients. TAZ devices have become very important as a consequence of their high surge capability, extremely fast response time, and low incremental surge resistance (Rs).

To characterize TAZ, a minimum voltage at low current conditions (V_{BR}), and a maximum clamping voltage (V_C), at a maximum peak pulse current are specified. In addition, a maximum clamping ratio is indicated. The maximum leakage current at the rated stand-off voltage is also provided to assure low power consumption under normal conditions.

APPLICATION

This TAZ series has a peak pulse power rating of 1500 watts for one millisecond. It can protect integrated circuits, hybrids, CMOS, MOS, and other voltage sensitive components in a broad range of applications such as telecommunications, power supplies, computers, automotive, and industrial equipment.

MAXIMUM RATINGS

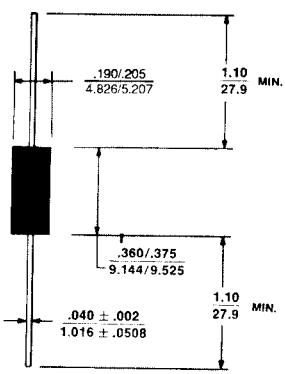
1500 Watts of Peak Pulse Power Dissipation at 25°C.

$t_{clamping}$ (0 Volts to $V_{(BR)}$ Min.):
Unidirectional $< 1 \times 10^{-12}$ Seconds; Bidirectional $< 5 \times 10^{-9}$ Seconds.
Operating and Storage Temperature -65°C to +175°C.
Forward Surge Rating 200 Amps, 1/20 Second at 25°C.
Steady State Power Dissipation 5.0 W @ T1 = 75°C.
(Not Applicable in Chip Form).

ELECTRICAL CHARACTERISTICS

Clamping Factor: 1.33 @ full rated power
1.20 @ 50% rated power

The Clamping Factor is defined as: The ratio of the actual V_C (Clamping Voltage) to the actual $V_{(BR)}$ (Breakdown Voltage) as measured on a specific device.



All dimensions in INCH / m.m.

MECHANICAL CHARACTERISTICS

CASE: Molded

WEIGHT: 1.5 Grams (Approx.)

POLARITY: Positive Terminal Marked with Band

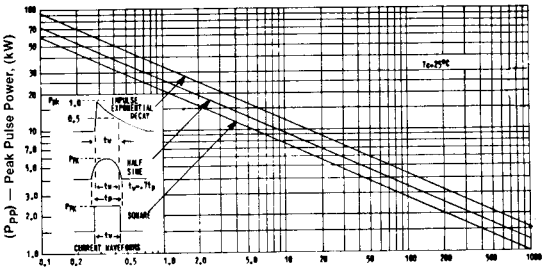

FIGURE 1

PEAK PULSE POWER VS. PULSE TIME (T w) IN μs

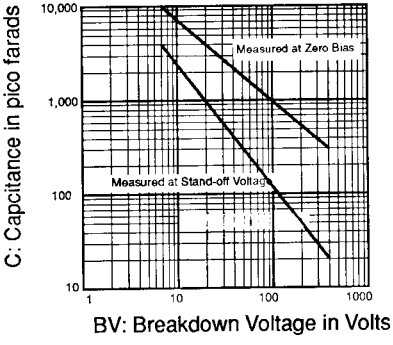

FIGURE 2

TYPICAL CAPACITANCE VS. BREAKDOWN VOLTAGE

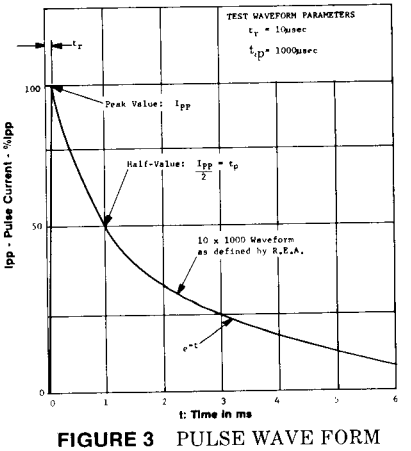

FIGURE 3 PULSE WAVE FORM

V_f at 100 amps peak. 8.3 ms sine wave equals 3.5 volts max. (unidirectional only). For Bidirectional part number add C or CA as suffix (e.e., 1.5KE33C or 1.5KE33CA). For Bidirectional types having V_{WM} of 8 volts and under, the I_D leakage current is doubled. 1N62XX or 1N5908 not available as bidirectional. For bipolar capacitance will be .5 that shown in Fig. 2 for zero bias.

SYMBOLS AND ABBREVIATIONS

V_{WM} = Rated Stand-off Voltage

I_{PP} = Peak Pulse Current

P_{PP} = Peak Pulse Power

$V_{C(MAX)}$ = Maximum Clamping Voltage

$V_{(BR)}$ = Breakdown Voltage

I_T = Test Current

I_D = Reverse Leakage

NOTE 1: Normal selection criteria for TAZ devices is by rated stand-off voltage (V_{WM}) and should be equal or greater than DC or continuous peak operating voltage.

NOTE 2: TAZ devices are tested to maximum peak pulse current (I_{PP}) with clamping voltage monitored. This surge capability is one of the most significant electrical characteristics of the device and should be considered as part of customer quality inspections.
