## ■ Difference between NJU3552 (OTP version) and NJU3502 (MASK version)

### ● Operating mode

**NJU3552** has two operating modes. One is "Normal operating mode" and the other is "OTP programming mode".

#### • Normal operating mode

The "TEST" terminal is set to low level. (The terminal is recommended to connect to GND.)  
 Operating voltage range; 2.7V ~ 5.5V.

#### • OTP Programming mode

User program is read out from or written into the OTP by the universal programmer "SUPERPRO/L" and converting adapter made by XELTEK co.,(USA).

### ● Option information set in the initialization

When the initialization is performed( $\overline{\text{RESET}}$  terminal is "L"), the operation information stored in option area is set as shown in the following timing chart. The option information is set in the term of  **$1 / f_{osc} \times 256\text{clock}$**  after RESET releasing and oscillation stability time. After information set, the program counter is set to 0000H and the **NJU3552** operates in normal.
