3.3 V, 1.5 Gb/s Dual AnyLevel™ to LVDS Receiver/Driver/Buffer/Translator

Description

NB4N855S is a clock or data Receiver/Driver/Buffer/Translator capable of translating AnyLevel™ input signal (LVPECL, CML, HSTL, LVDS, or LVTTL/LVC MOS) to LVDS. Depending on the distance, noise immunity of the system design, and transmission line media, this device will receive, drive or translate data or clock signals up to 1.5 Gb/s or 1.0 GHz, respectively. This device is pin-for-pin plug in compatible to the SY55855V in a 3.3 V applications.

The NB4N855S has a wide input common mode range of $GND + 50\text{ mV}$ to $V_{CC} - 50\text{ mV}$. This feature is ideal for translating differential or single-ended data or clock signals to 350 mV typical LVDS output levels.

The device is offered in a small 10 lead MSOP package. NB4N855S is targeted for data, wireless and telecom applications as well as high speed logic interface where jitter and package size are main requirements.
