NB6L239

2.5 V / 3.3 V Any Differential Clock IN to Differential LVPECL OUT ÷1/2/4/8, ÷2/4/8/16 Clock Divider

Features

The NB6L239 is a high−speed, low skew clock divider with two divider circuits, each having selectable clock divide ratios; ÷1/2/4/8 and ÷2/4/8/16. Both divider circuits drive a pair of differential LVPECL outputs. (More device information on page 7).

- Maximum Clock Input Frequency, 3.0 GHz
- Input Compatibility with LVDS/LVPECL/CML/HSTL
- Rise/Fall Time 70 ps Typical
- < 10 ps Typical Output−to−Output Skew
- Ex. 622 MHz Input Generates 38.8 MHz to 622 MHz Outputs
- Internal 50 Ω Termination Provided
- Random Clock Jitter < 1 ps RMS
- Divide−by−1 Edge of QA Aligned to QB Divided Output
- Operating Range: V_{CC} = 2.375 V to 3.465 V with V_{EE} = 0 V
- Master Reset for Synchronization of Multiple Chips
- V_{BBAC} Reference Output
- Synchronous Output Enable/Disable

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 11 of this data sheet.

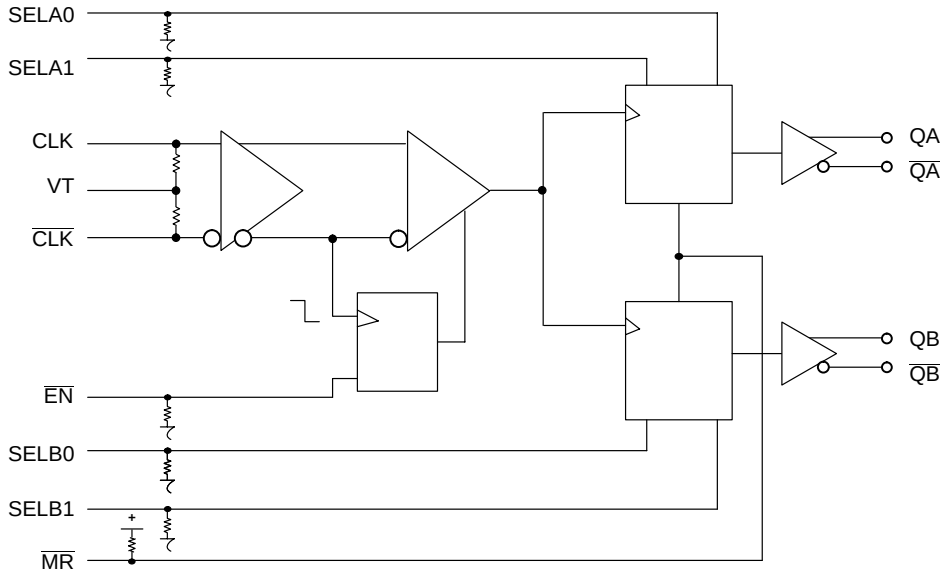

Figure 1. Simplified Logic Diagram

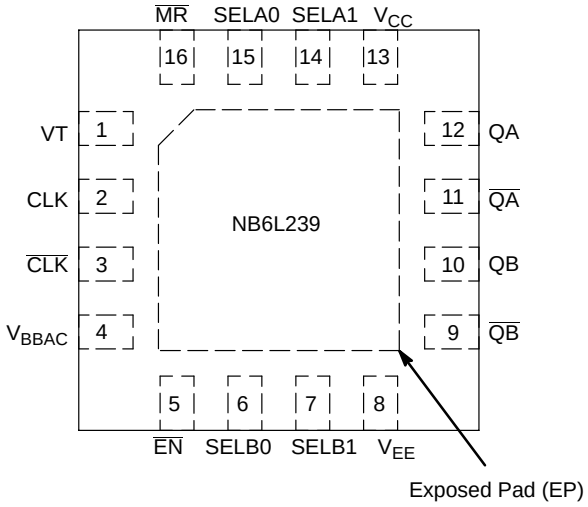

Figure 2. Pinout: QFN−16 (Top View)

Table 1. PIN DESCRIPTION

Pin	Name	I/O	Description
1	VT		Internal 100 Ω Center−Tapped Termination Pin for CLK and $\overline{CLK}$.
2	CLK	LVPECL, CML, LVDS, HSTL Input	Noninverted Differential CLOCK Input.
3	$\overline{CLK}$	LVPECL, CML, LVDS, HSTL Input	Inverted Differential CLOCK Input.
4	V_{BBAC}		Output Voltage Reference for Capacitor Coupled Inputs, Only.
5	$\overline{EN}$*	LVCMOS/LVTTL Input	Synchronous Output Enable
6	SELB0*	LVCMOS/LVTTL Input	Clock Divide Select Pin
7	SELB1*	LVCMOS/LVTTL Input	Clock Divide Select Pin
8	V_{EE}	Power Supply	Negative Supply Voltage
9	$\overline{QB}$	LVPECL Output	Inverted Differential Output. Typically terminated with 50 Ω resistor to V_{TT}.
10	QB	LVPECL Output	Noninverted Differential Output. Typically terminated with 50 Ω resistor to V_{TT}.
11	$\overline{QA}$	LVPECL Output	Inverted Differential Output. Typically terminated with 50 Ω resistor to V_{TT}.
12	QA	LVPECL Output	Noninverted Differential Output. Typically terminated with 50 Ω resistor to V_{TT}.
13	V_{CC}	Power Supply	Positive Supply Voltage.
14	SELA1*	LVCMOS/LVTTL Input	Clock Divide Select Pin
15	SELA0*	LVCMOS/LVTTL Input	Clock Divide Select Pin
16	$\overline{MR}$**	LVCMOS/LVTTL Input	Master Reset Asynchronous, Default Open High, Asserted LOW
	EP	Power Supply (OPT)	The Exposed Pad on the QFN−16 package bottom is thermally connected to the die for improved heat transfer out of package. The pad is not electrically connected to the die, but is recommended to be electrically and thermally connected to V_{EE} on the PC board.

*Pins will default LOW when left OPEN.
**Pins will default HIGH when left OPEN.

MAXIMUM RATINGS

Symbol	Parameter	Condition 1	Condition 2	Rating	Units
V_{CC}	Positive Mode Power Supply	V_{EE} = 0 V		3.6	V
V_I	Input Voltage	V_{EE} = 0 V	$V_{EE} \le V_I \le V_{CC}$	3.6	V
I_{out}	Output Current	Continuous Surge		50 100	mA mA
I_{BB}	V_{BBAC} Sink/Source			± 0.5	mA
T_A	Operating Temperature Range			−40 to +85	°C
T_{stg}	Storage Temperature Range			−65 to +150	°C
θ_{JA}	Thermal Resistance (Junction−to−Ambient)	0 lfpm 500 lfpm		41.6 35.2	°C/W °C/W
θ_{JC}	Thermal Resistance (Junction−to−Case)	Standard Board		4.0	°C/W
T_{sol}	Wave Solder	< 3 sec @ 248°C		265	°C

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

2. Input and output parameters vary 1:1 with V_{CC}.
3. Outputs loaded with 50 Ω to V_{CC} – 2.0 V for proper operation.
4. V_{th} is applied to the complementary input when operating in single−ended mode.
5. $VCMR_{MIN}$ varies 1:1 with V_{EE}, $VCMR_{MAX}$ varies 1:1 with V_{CC}.
6. Input and output voltage swing is a single−ended measurement operating in differential mode.
7. V_{BBAC} used to rebias capacitor−coupled inputs only (see Figures 16 and 17).

Table 7. DC CHARACTERISTICS, LVTTL/LVCMOS INPUTS (V_{CC} = 2.375 V to 3.465 V, V_{EE} = 0 V, T_A = −40°C to +85°C)

Symbol	Characteristic	Min	Typ	Max	Unit
V_{IH}	Input HIGH Voltage (LVCMOS/LVTTL)	2.0		V_{CC}	V

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

8. Measured using a 750 mV, 50% duty cycle clock source. All loading with 50 Ω to V_{CC} − 2.0 V.
9. Skew is measured between outputs under identical transitions and conditions. Duty cycle skew is defined only for differential operation when the delays are measured from the cross point of the inputs to the cross point of the outputs.
10. Input and output voltage swing is a single−ended measurement operating in differential mode.
11. Output Voltage Amplitude (V_{OHCLK} − V_{OLCLK}) at input CLOCK frequency, f_{in}. The output frequency, f_{out}, is the input CLOCK frequency divided by n, $f_{out} = f_{in} \div n$. Input CLOCK frequency is ≤3.0 GHz.

Application Information

The NB6L239 is a high−speed, low skew clock divider with two divider circuits, each having selectable clock divide ratios; ÷1/2/4/8 and ÷2/4/8/16. Both divider circuits drive a pair of differential LVPECL outputs. The internal dividers are synchronous to each other. Therefore, the common output edges are precisely aligned.

The NB6L239 clock inputs can be driven by a variety of differential signal level technologies including LVDS, LVPECL, HSTL, or CML. The differential clock input buffer employs a pair of internal 50 Ω termination resistors in a 100 Ω center−tapped configuration and accessible via the VT pin. This feature provides transmission line termination on−chip, at the receiver end, eliminating external components. The V_{BBAC} reference output can be used to rebias capacitor−coupled differential or single−ended input CLOCK signals. For the capacitor−coupled CLK and/or $\overline{CLK}$ inputs, V_{BBAC} should be connected to the V_T pin and bypassed to ground with a 0.01 μF capacitor. Inputs CLK and $\overline{CLK}$ must be signal driven or auto oscillation may result.

The common enable ($\overline{EN}$) is synchronous so that the internal divider flip−flops will only be enabled/disabled when the internal clock is in the LOW state. This avoids any chance of generating a runt pulse on the internal clock when the device is enabled/disabled, as can happen with an asynchronous control. The internal enable flip−flop is clocked on the falling edge of the input clock. Therefore, all associated specification limits are referenced to the negative edge of the clock input.

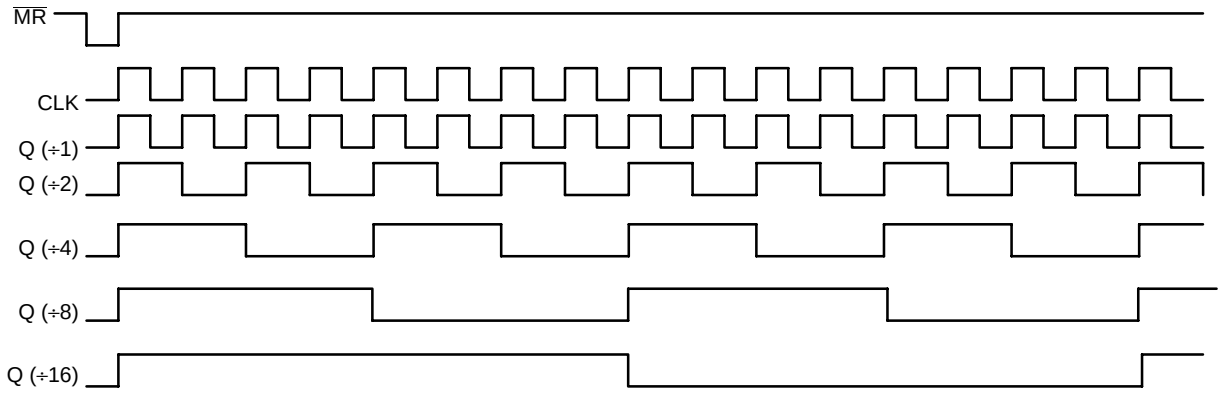

Figure 4. Timing Diagram

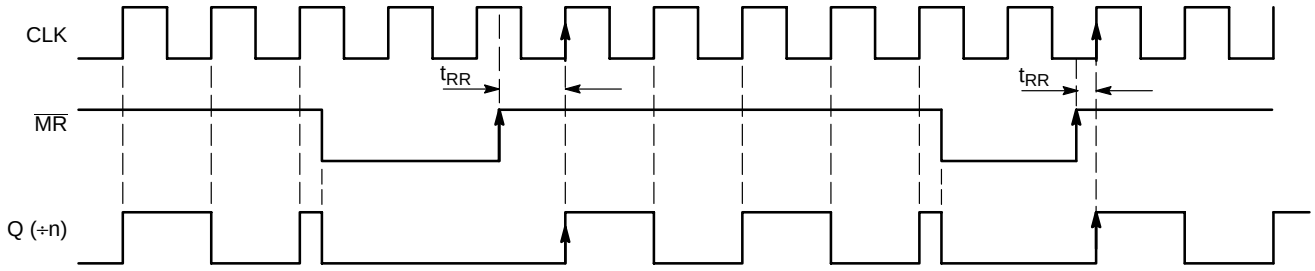

Figure 5. Master Reset Timing Diagram

NOTE: On the rising edge of $\overline{MR}$, Q goes HIGH after the first rising edge of CLK.

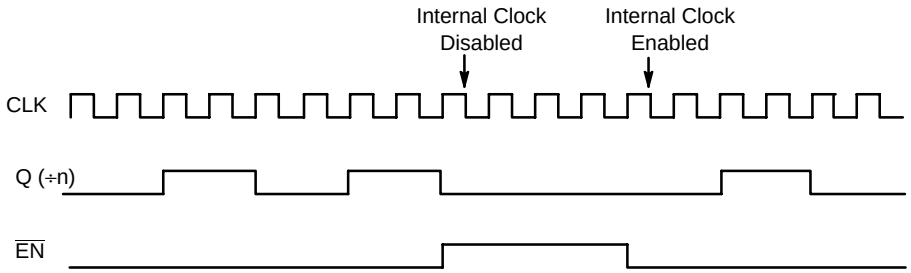

Figure 6. Output Enable Timing Diagrams

The $\overline{EN}$ signal will “freeze” the internal divider flip−flops on the first falling edge of CLK after its assertion. The internal divider flip−flops will maintain their state during the freeze. When $\overline{EN}$ is deasserted (LOW), and after the next falling edge of CLK, then the internal divider flip−flops will “unfreeze” and continue to their next state count with proper phase relationships.
