

Four-Bit Single-Chip Microcontroller with 16 KB of On-Chip OTP PROM

Preriminary

Overview

The LC66P5316 is an on-chip OTP PROM version of the LC6653XX Series CMOS 4-bit single-chip microcontrollers. The LC66P5316 is appropriate for program development and product evaluation since it provides identical functionality and pin compatibility with the LC665316A.

Features and Functions

- On-chip OTP ROM capacity of 16 kilobytes, and an on-chip RAM capacity of 512×4 bits.
- Fully supports the LC66000 Series common instruction set (128 instructions).
- I/O ports: 42 pins
- A sub-oscillator circuit can be used (option)
This circuit allows power dissipation to be reduced by operating at lower speeds.
- 8-bit serial interface: two circuits (can be connected in cascade to form a 16-bit interface)
- Instruction cycle time: 0.95 to 10 μ s (at 4.0 to 5.5 V)
- Powerful timer functions and prescalers
 - Time limit timer, event counter, pulse width measurement, and square wave output using a 12-bit timer.
 - Time limit timer, event counter, PWM output, and square wave output using an 8-bit timer.
 - Time base function using a 12-bit prescaler
- Powerful interrupt system with 8 interrupt factors and 8 interrupt vector locations.
 - External interrupts: 3 factors/3 vector locations
 - Internal interrupts: 5 factors/5 vector locations
- Flexible I/O functions
16-value comparator inputs, 20-mA drive outputs, inverter circuits, pull-up and open-drain circuits selectable as options.
- Optional runaway detection function (watchdog timer)
- 8-bit I/O functions
- Power saving functions using halt and hold modes.
- Packages: DIP48S, QIP48E (QFP48E)
- Evaluation LSIs: LC66599 (evaluation chip) + EVA800/850-TB662YXX2

Note: * Under development

Pin Assignments

Top view

We recommend the use of reflow soldering techniques to solder-mount QFP packages.

Please consult with your Sanyo representative for details on process conditions if the package itself is to be directly immersed in a dip-soldering bath (dip-soldering techniques).

Usage Notes

The LC66P5316 was created for program development, product evaluation, and prototype development for products based on the LC6653XX Series microcontrollers. Keep the following points in mind when using this product.

1. After a reset

The $\overline{\text{RES}}$ pin must be held low for an additional 3 instruction cycles after the oscillator stabilization period has elapsed. Also, the port output circuit types are set up during the 9 instruction cycles immediately after $\overline{\text{RES}}$ is set high. Only then is the program counter set to 0 and program execution started from that location. (The port output circuits all revert to the open-drain type during periods when $\overline{\text{RES}}$ is low.)

2. Notes on LC6653XX evaluation

The high end of the EPROM area (locations 3FF0H to 3FFFH) are the option specification area. Option specification data must be programmed for and loaded into this area. The Sanyo specified cross assembler for this product is the program LC66S.EXE. Also, insert JMP instructions so that user programs do not attempt to execute addresses that exceed the capacity of the mask ROM, and write zeros (00H) to areas (other than 3FF0H to 3FFFH) that exceed the actual capacity of the mask ROM.

3. Mounting notes

Due to structural considerations, Sanyo is unable to fully test one-time programmable products. Therefore, the user must apply the screening procedure described on page 20 to these products.

4. Use the following procedure when ordering ROM through the Sanyo PROM writing service. (Note that this is a for-fee service.)

- If ordering one-time programmable and mask ROM versions at the same time:

The customer must provide the EPROM for the mask ROM version, the order forms for the mask ROM version, and the order forms for the one-time programmable version.

- If ordering only the one-time programmable version:

The customer must provide the EPROM and the order forms for the one-time programmable version. The last section of the EPROM (locations 3FF0H to 3FFFH) is the option specification area, and the option specification data must be written to this area. The Sanyo specified cross assembler for this product is the program LC66S.EXE. Also, insert JMP instructions so that user programs do not attempt to execute addresses that exceed the capacity of the mask ROM, and write zeros (00H) to areas (other than 3FF0H to 3FFFH) that exceed the actual capacity of the mask ROM.

5. Differences between this product and the mask ROM version:

Carefully read the sections on the following pages that describe these differences.

Main differences between the LC66E5316, LC66P5316, and LC6653XX Series

Item	LC6653XX Series (mask version)	LC66E5316	LC66P5316
Differences in the main characteristics • Operating temperature range	-30 to +70°C	+10 to +40°C	-30 to +70°C
• Operating supply voltage/operating frequency (cycle time)	3.0 to 5.5 V/0.95 to 10 μs (When the main oscillator is operating) 3.0 to 5.5 V/25 to 127 μs (When the sub-oscillator is operating)	4.5 to 5.5 V/0.95 to 10 μs (When the main oscillator is operating) 4.5 to 5.5 V/25 to 127 μs (When the sub-oscillator is operating)	4.0 to 5.5 V/0.92 to 10 μs (When the main oscillator is operating) 4.0 to 5.5 V/25 to 127 μs (When the sub-oscillator is operating)
• Input high-level current (\overline{RES})	Maximum: 1 μA	Typical: 10 μA (normal operation and halt mode) Hold mode: 1 μA maximum	Typical: 10 μA (normal operation and halt mode) Hold mode: 1 μA maximum
• Input low-level current (\overline{RES})	Maximum: 1 μA	Typical: 100 μA	Typical: 100 μA
• Current drain (Operating at 4 MHz) (Operating at 32 kHz) (Halt mode at 4 MHz) (Halt mode at 32 kHz) (Hold mode)	Typical: 10 nA, maximum: 10 μA	Larger than that for the mask versions Typical: 10 nA, maximum: 10 μA*	Larger than that for the mask versions Typical: 10 nA, maximum: 10 μA*
Port output types at reset	The output type specified in the options	Open-drain outputs	Open-drain outputs
Package	• DIP48S • QFP48E	• DIC52S window package • QFC48 window package	• DIP48S • QFP48E

Note: * Although the microcontroller will remain in hold mode if the \overline{RES} pin is set low while it is in hold mode, always use the reset start sequence (after switching \overline{HOLD} from low to high, switch \overline{RES} from low to high) when clearing hold mode. Also a current of about 100 μA flows from the \overline{RES} pin when it is low. This increases the hold mode current drain by about 100 μA.

See the data sheets for the individual products for details on other differences.

System Block Diagram

Pin Function Overview

Pin	I/O	Overview	Output driver type	Options	State after a reset	Standby mode operation

PE0/XT1 PE1/XT2	I	Dedicated input ports and sub-oscillator connections		Sub-oscillator/port PE selection	Option selection	
OSC1 OSC2	I O	System clock oscillator connections When an external clock is used, leave OSC2 open and connect the clock signal to OSC1.		Ceramic oscillator or external clock selection	Option selection	Hold mode: Oscillator stops ----- Halt mode: Oscillator continues
$\overline{RES}/V_{pp}/\overline{OE}$	I	System reset input <ul style="list-style-type: none"> When the P33/HOLD pin is at the high level, a low level input to the RES pin will initialize the CPU. Used as the V_{pp}/\overline{OE} pin in EPROM mode. 				
TEST/ EPMOD	I	CPU test pin This pin must be connected to V_{SS} during normal operation.				
V_{DD} V_{SS}		Power supply pins				

Note: Pull-up MOS type: The output circuit includes a MOS transistor that pulls the pin up to V_{DD} .
 CMOS output: Complementary output.
 OD output: Open-drain output.

User Options

1. Port 0, 1, 4, 5, and 8 output level at reset option

The output levels at reset for I/O ports 0, 1, 4, 5, and 8, in independent 4-bit groups, can be selected from the following two options.

Option	Conditions and notes
1. Output high at reset	The four bits of ports 0, 1, 4, 5, or 8 are set in a group
2. Output low at reset	The four bits of ports 0, 1, 4, 5, or 8 are set in a group

2. Oscillator circuit options

• Main clock

Option	Circuit	Conditions and notes
1. External clock		The input has Schmitt characteristics
2. Ceramic oscillator		

Note: There is no RC oscillator option.

• Sub-clock

Option	Circuit	Conditions and notes
1. Ports PE0 and PE1		
2 Sub-oscillator (crystal oscillator)		

3. Watchdog timer option

A runaway detection function (watchdog timer) can be selected as an option.

4. Port output type options

• The output type of each bit (pin) in ports P0, P1, P2, P3 (except for the P33/ $\overline{\text{HOLD}}$ pin), P4, P5, P6, and PC can be

Option	Circuit	Conditions and notes
1. Open-drain output		The port P2, P3, P5, and P6 inputs have Schmitt characteristics.
2. Output with built-in pull-up resistor		The port P2, P3, P5, and P6 inputs have Schmitt characteristics. The CMOS outputs (ports P2, P3, P6, and PC) and the pull-up MOS outputs (P0, P1, P4, and P5) are distinguished by the drive capacity of the p-channel transistor.

- One of the following two options can be selected for P8, in bit units.

Option	Circuit	Conditions and notes
1. Open-drain output		
2. Output with built-in pull-down resistor (CMOS output)		

5. Inverter array circuit option

One of the following options can be selected for each of the following port sets: P40/P41, P42/P43, PC2/PC3, PD0/PD1, and PD2/PD3. (PDs do not use option 1 because they are dedicated to inputs.)

Option	Circuit	Conditions and notes
1. Normal port I/O circuit		When the open-drain output type is selected
		When the built-in pull-up resistor output type is selected The CMOS outputs (PC) and the pull-up MOS outputs (P4) are distinguished by the drive capacity of the p-channel transistor.
2. Inverter I/O circuit		If this option is selected, the I/O circuit is disabled by the \overline{DSB} signal. Also note that the open-drain port output type option and the high level at reset option must be selected.

6. Buffer array circuit option

In addition to normal port output, one of the following two options may also be selected for P80 and P81.

Option	Circuit	Conditions and notes
<p>1. Normal port output</p>		<p>When the open-drain output type is selected</p>
		<p>When the built-in pull-down resistor output type is selected (CMOS output)</p>
<p>2. Buffer input (P80) and buffer output (P81) circuits</p>		<p>If this option is selected, the I/O circuit is disabled by the \overline{DSB} signal. Also note that the open-drain port output type option and the high level at reset option must be selected.</p>
<p>3. Buffer input (P80) and buffer output (P81) circuits with built-in zero-cross detection circuits</p>		<p>If this option is selected, the I/O circuit is disabled by the \overline{DSB} signal. Also note that the open-drain port output type option and the high level at reset option must be selected.</p>

Usage Notes

1. Option specification

When using a Sanyo cross assembler with the LC66P5316, use the version called "LC66S.EXE" and specify the actual microcontroller to be evaluated with the CPU pseudoinstruction in the source file. The port options must be specified in the source file. The cross assembler will create an options code list in the option specification area (locations 3FF0H to 3FFFH). It is also possible to directly set up data in the option specification area. If this is done, the options must be specified according to the option code creation table shown on the following page.

2. Writing the EPROM

Use a special-purpose writing conversion board (the W66EP5316D for the DIP package, and the W66EP5316Q for the QFP package) to allow the EPROM programmers listed below to be used when writing the data created by the cross assembler to the LC66P5316.

- The EPROM programmers listed below can be used.

Manufacturer	Models that can be used
Advantest	R4945, R4944A, R4943, or equivalent products
Ando	AF9704
AVAL	—
Minato Electronics	MODEL1890A

- The "27512 (V_{PP} 12.5 V) Intel high-speed write" technique must be used to write the EPROM. Set the address range to location 0 to 3FFFH. The DASEC jumper must be off.

3. Using the data security function

The data security function sets up the microcontroller in advance so that data that was written to the microcontroller EPROM cannot be read out.

Use the following procedure to enable the LC66P5316 data security function.

- Set the write conversion board DASEC jumper to the on position.
- Write the data to the EPROM once again.

At this time, since this function will operate, the EPROM programmer will issue an error. However, this error does not indicate that there was a problem in either the programmer or the LSI.

Notes: 1. If the data at all addresses was "FF" at step 2, the data security function will not be activated.

2. The data security function will not be activated at step 2 if the "blank → program → verify" operation sequence is used.

3. Always return the jumper to the off position after the data security function has been activated.

Specifications

Absolute Maximum Ratings at Ta = 25°C, VSS = 0 V

Parameter	Symbol	Conditions	Ratings	Unit	Note
Maximum supply voltage	V _{DD max}	V _{DD}	-0.3 to +7.0	V	
Input voltage	V _{IN1}	P2, P3 (except for the P33/HOLD pin), P61, and P63	-0.3 to +7.0	V	1
	V _{IN2}	All other inputs	-0.3 to V _{DD} + 0.3	V	2
Output voltage	V _{OUT1}	P2, P3 (except for the P33/HOLD pin), P61, and P63	-0.3 to +7.0	V	1
	V _{OUT2}	All other inputs	-0.3 to V _{DD} + 0.3	V	2
Output current per pin	I _{ON1}	P0, P1, P2, P3 (except for the P33/HOLD pin), P4, P5, P6, P8, PC, PD1, PD3	20	mA	3
	-I _{OP1}	P0, P1, P4, P5	2	mA	4
	-I _{OP2}	P2, P3 (except for the P33/HOLD pin), P6, P8, and PC	4	mA	4
	-I _{OP3}	P41, P43, PC3, PD1, PD3, P81	10	mA	4
Total pin current	Σ I _{ON1}	P4, P5, P6, P8, PC	75	mA	3
	Σ I _{ON2}	P0, P1, P2, P3 (except for the P33/HOLD pin), PD1, PD3	75	mA	3
	Σ I _{OP1}	P4, P5, P6, P8, PC	25	mA	4
	Σ I _{OP2}	P0, P1, P2, P3 (except for the P33/HOLD pin), PD1, PD3	25	mA	4
Allowable power dissipation	Pd max	Ta = -30 to +70°C: DIP48S (QFP48E)	600 (430)	mW	5
Operating temperature	Topr		-30 to +70	°C	
Storage temperature	Tstg		-55 to +125	°C	

- Note: 1. Applies to pins with open-drain output specifications. For pins with other than open-drain output specifications, the ratings in the pin column for that pin apply.
2. For the oscillator input and output pins, levels up to the free-running oscillation level are allowed.
3. Sink current (Applies to P8 and PD when either the CMOS output specifications or the inverter array specifications have been selected.)
4. Source current (Applies to all pins except P8 and PD for which the pull-up output specifications, the CMOS output specifications, or the inverter array specifications have been selected. Applies to PD pins for which the inverter array specifications have been selected.) Contact your Sanyo representative for the electrical characteristics when the inverter array or buffer array options are specified.
5. We recommend the use of reflow soldering techniques to solder mount QFP packages. Please consult with your Sanyo representative for details on process conditions if the package itself is to be directly immersed in a solder dip bath (solder dip or spray techniques).

Allowable Operating Ranges at Ta = -30 to +70°C, V_{SS} = 0 V, V_{DD} = 4.0 to 5.5 V, unless otherwise specified.

Parameter	Symbol	Conditions	min	typ	max	Unit	Note
Operating supply voltage	V _{DD}	V _{DD}	4.0		5.5	V	
Memory retention supply voltage	V _{DDH}	V _{DD} : During hold mode	1.8		5.5	V	
Input high-level voltage	V _{IH1}	P2, P3 (except for the P33/ $\overline{\text{HOLD}}$ pin), P61, and P63: N-channel output transistor off	0.8 V _{DD}		+7.0	V	1
	V _{IH2}	P33/ $\overline{\text{HOLD}}$, RES, OSC1: N-channel output transistor off	0.8 V _{DD}		V _{DD}	V	
	V _{IH3}	P0, P1, P4, P5, PC, PD, PE: N-channel output transistor off	0.8 V _{DD}		V _{DD}	V	2
Input low-level voltage	V _{IL1}	P2, P3 (except for the P33/ $\overline{\text{HOLD}}$ pin), P6, RES, and OSC1: N-channel output transistor off	V _{SS}		0.2 V _{DD}	V	
	V _{IL2}	P33/ $\overline{\text{HOLD}}$: V _{DD} = 1.8 to 5.5 V	V _{SS}		0.2 V _{DD}	V	
	V _{IL3}	P0, P1, P4, P5, PC, PD, PE, TEST: N-channel output transistor off	V _{SS}		0.2 V _{DD}	V	2
Operating frequency (instruction cycle time)	f _{op} (T _{cyc})	When the main oscillator is operating	0.4 (10)		4.20 (0.95)	MHz (μ s)	
		When the sub-oscillator is operating	30 (133.2)	32.768 (122)	100 (40)	kHz (μ s)	
[External clock input conditions]							
Frequency	f _{ext}	OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.)	0.4		4.20	MHz	
Pulse width	t _{extH} , t _{extL}	OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.)	100			ns	
Rise and fall times	t _{extR} , t _{extF}	OSC1: Defined by Figure 1. Input the clock signal to OSC1 and leave OSC2 open. (External clock input must be selected as the oscillator circuit option.)			30	ns	

- Note: 1. Applies to pins with open-drain specifications. However, V_{IH2} applies to the P33/ $\overline{\text{HOLD}}$ pin. When ports P2, P3, and P6 have CMOS output specifications they cannot be used as input pins.
2. PC port pins with CMOS output specifications cannot be used as input pins. Contact your Sanyo representative for the allowable operating ranges for P4, PC, and PD when the inverter array is used, and for P8 when the buffer array is used.
3. Applies to pins with open-drain specifications. However, V_{IL2} applies to the P33/ $\overline{\text{HOLD}}$ pin. P2, P3, and P6 port pins with CMOS output specifications cannot be used as input pins.

Electrical Characteristics at Ta = –30 to +70°C, V_{SS} = 0 V, V_{DD} = 4.0 to 5.5 V unless otherwise specified.

Parameter	Symbol	Conditions	min	typ	max	Unit	Note
Input high-level current	I _{IH1}	P2, P3 (except for the P33/HOLD pin), P61, and P63: V _{IN} = +10.0 V, with the output Nch transistor off			5.0	μA	1
	I _{IH2}	P0, P1, P4, P5, P6, PC, OSC1, and P33/HOLD (Does not apply to PD, PE, PC2, and PC3): V _{IN} = V _{DD} , with the output Nch transistor off			1.0	μA	1
	I _{IH3}	PD, PC2, PC3, PE0, (When used as a port; does not apply when the sub-oscillator option is selected.): V _{IN} = V _{DD} , with the output Nch transistor off			1.0	μA	1

Preconditions for mounting one-time programmable microprocessors

Usage Notes

Due to inherent structural considerations, it is impossible to fully test one-time programmable microprocessors before the PROM has been programmed, i.e. before shipment from the factory. We recommend that users screen products whose PROM has been written according to the following procedure to improve the reliability of these products.

- Due to the nature of the product, it is not possible to test write operations to all bits in one-time programmable microprocessors whose PROM has not been written. Therefore it may be impossible to guarantee a 100% yield on writing to these products. Please understand that no such guarantee may be made.
- Storage of products in the moisture-proof packed (unopened) state
- Store products in moisture-proof packages in an environment in which the temperature is no higher than 30°C and the relative humidity is no higher than 70%.
- Storage of products after opening the moisture-proof packaging
- After opening products that were packed in moisture-proof packaging, mount (solder) those products as soon as possible. Store products for no more than 96 hours after opening the moisture-proof packaging in an environment in which the temperature is no higher than 30°C and the relative humidity is no higher than 70%.

b. Preconditions for mounting products that were programmed by Sanyo

Sanyo ROM writing service

Sanyo provides a for-fee ROM writing service that includes writing the one-time programmable ROM, printing, screening, and read-out verification. Contact your Sanyo sales representative for details.

LC66XXXX Series Instruction Table (by function)

Abbreviations:

AC:	Accumulator
E:	E register
CF:	Carry flag
ZF:	Zero flag
HL:	Data pointer DPH, DPL
XY:	Data pointer DPX, DPY
M:	Data memory
M (HL):	Data memory pointed to by the DPH, DPL data pointer
M (XY):	Data memory pointed to by the DPX, DPY auxiliary data pointer
M2 (HL):	Two words of data memory (starting on an even address) pointed to by the DPH, DPL data pointer
SP:	Stack pointer
M2 (SP):	Two words of data memory pointed to by the stack pointer
M4 (SP):	Four words of data memory pointed to by the stack pointer
in:	n bits of immediate data
t2:	Bit specification

t2	11	10	01	00
Bit	2 ³	2 ²	2 ¹	2 ⁰

PCh:	Bits 8 to 11 in the PC
PCm:	Bits 4 to 7 in the PC
PCl:	Bits 0 to 3 in the PC
Fn:	User flag, n = 0 to 15
TIMER0:	Timer 0
TIMER1:	Timer 1
SIO:	Serial register
P:	Port
P (i4):	Port indicated by 4 bits of immediate data
INT:	Interrupt enable flag
(), []:	Indicates the contents of a location
←:	Transfer direction, result
⊕:	Exclusive or
∧:	Logical and
∨:	Logical or
+	Addition
-:	Subtraction
—:	Taking the one's complement

Mnemonic	Instruction code		Number of bytes	Number of cycles	Operation	Description	Affected status bits	Note

[Accumulator manipulation instructions]									
CLA	Clear AC	1 0 0 0	0 0 0 0	1	1	AC ← 0 (Equivalent to LAI 0.)	Clear AC to 0.	ZF	Has a vertical skip function.
DAA	Decimal adjust AC in addition	1 1 0 0 0 0 1 0	1 1 1 1 0 1 1 0	2	2	AC ← (AC) + 6 (Equivalent to ADI 6.)	Add six to AC.	ZF	
DAS	Decimal adjust AC in subtraction	1 1 0 0 0 0 1 0	1 1 1 1 1 0 1 0	2	2	AC ← (AC) + 10 (Equivalent to ADI 0AH.)	Add 10 to AC.	ZF	
CLC	Clear CF	0 0 0 1	1 1 1 0	1	1	CF ← 0	Clear CF to 0.	CF	
STC	Set CF	0 0 0 1	1 1 1 1	1	1	CF ← 1	Set CF to 1.	CF	
CMA	Complement AC	0 0 0 1	1 0 0 0	1	1	AC ← $\overline{(AC)}$	Take the one's complement of AC.	ZF	
IA	Increment AC	0 0 0 1	0 1 0 0	1	1	AC ← (AC) + 1	Increment AC.	ZF, CF	
DA	Decrement AC	0 0 1 0	0 1 0 0	1	1	AC ← (AC) - 1	Decrement AC.	ZF, CF	
RAR	Rotate AC right through CF	0 0 0 1	0 0 0 0	1	1	AC ₃ ← (CF), AC _n ← (AC _n + 1), CF ← (AC ₀)	Shift AC (including CF) right.	CF	
RAL	Rotate AC left through CF	0 0 0 0	0 0 0 1	1	1	AC ₀ ← (CF), AC _n + 1 ← (AC _n), CF ← (AC ₃)	Shift AC (including CF) left.	CF, ZF	
TAE	Transfer AC to E	0 1 0 0	0 1 0 1	1	1	E ← (AC)	Transfer the contents of AC to E.		
TEA	Transfer E to AC	0 1 0 0	0 1 1 0	1	1	AC ← (E)	Transfer the contents of E to AC.	ZF	
XAE	Exchange AC with E	0 1 0 0	0 1 0 0	1	1	(AC) ↔ (E)	Exchange the contents of AC and E.		
[Memory manipulation instructions]									
IM	Increment M	0 0 0 1	0 0 1 0	1	1	M (HL) ← [M (HL)] + 1	Increment M (HL).	ZF, CF	
DM	Decrement M	0 0 1 0	0 0 1 0	1	1	M (HL) ← [M (HL)] - 1	Decrement M (HL).	ZF, CF	
IMDR i8	Increment M direct	1 1 0 0 I ₇ I ₆ I ₅ I ₄	0 1 1 1 I ₃ I ₂ I ₁ I ₀	2	2	M (i8) ← [M (i8)] + 1	Increment M (i8).	ZF, CF	
DMDR i8	Decrement M direct	1 1 0 0 I ₇ I ₆ I ₅ I ₄	0 0 1 1 I ₃ I ₂ I ₁ I ₀	2	2	M (i8) ← [M (i8)] - 1	Decrement M (i8).	ZF, CF	
SMB t2	Set M data bit	0 0 0 0	1 1 t ₁ t ₀	1	1	[M (HL), t2] ← 1	Set the bit in M (HL) specified by t0 and t1 to 1.		
RMB t2	Reset M data bit	0 0 1 0	1 1 t ₁ t ₀	1	1	[M (HL), t2] ← 0	Clear the bit in M (HL) specified by t0 and t1 to 0.	ZF	
[Arithmetic, logic and comparison instructions]									
AD	Add M to AC	0 0 0 0	0 1 1 0	1	1	AC ← (AC) + [M (HL)]	Add the contents of AC and M (HL) as two's complement values and store the result in AC.	ZF, CF	
ADDR i8	Add M direct to AC	1 1 0 0 I ₇ I ₆ I ₅ I ₄	1 0 0 1 I ₃ I ₂ I ₁ I ₀	2	2	AC ← (AC) + [M (i8)]	Add the contents of AC and M (i8) as two's complement values and store the result in AC.	ZF, CF	
ADC	Add M to AC with CF	0 0 0 0	0 0 1 0	1	1	AC ← (AC) + [M (HL)] + (CF)	Add the contents of AC, M (HL) and C as two's complement values and store the result in AC.	ZF, CF	
ADI i4	Add immediate data to AC	1 1 0 0 0 0 1 0	1 1 1 1 I ₃ I ₂ I ₁ I ₀	2	2	AC ← (AC) + I ₃ , I ₂ , I ₁ , I ₀	Add the contents of AC and the immediate data as two's complement values and store the result in AC.	ZF	
SUBC	Subtract AC from M with CF	0 0 0 1	0 1 1 1	1	1	AC ← [M (HL)] - (AC) - (CF)	Subtract the contents of AC and CF from M (HL) as two's complement values and store the result in AC.	ZF, CF	CF will be zero if there was a borrow and one otherwise.
ANDA	And M with AC then store AC	0 0 0 0	0 1 1 1	1	1	AC ← (AC) ∧ [M (HL)]	Take the logical and of AC and M (HL) and store the result in AC.	ZF	
ORA	Or M with AC then store AC	0 0 0 0	0 1 0 1	1	1	AC ← (AC) ∨ [M (HL)]	Take the logical or of AC and M (HL) and store the result in AC.	ZF

SPB t2	Set port bit	0 0 0 0	1 0 t ₁ t ₀	1	1	[P (DP _L), t2] ← 1	Set to one the bit in port P (DP _L) specified by the immediate data t ₁ t ₀ .	
RPB t2	Reset port bit	0 0 1 0	1 0 t ₁ t ₀	1	1	[P (DP _L), t2] ← 0	Clear to zero the bit in port P (DP _L) specified by the immediate data t ₁ t ₀ .	ZF
ANDPDR i4, p4	And port with immediate data then output	1 1 0 0 i ₃ i ₂ i ₁ i ₀	0 1 0 1 P ₃ P ₂ P ₁ P ₀	2	2	P (P ₃ to P ₀) ← [P (P ₃ to P ₀)] ∨ i ₃ to i ₀	Take the logical AND of P (P ₃ to P ₀) and the immediate data i ₃ i ₂ i ₁ i ₀ and output the result to P (P ₃ to P ₀).	ZF
ORPDR i4, p4	Or port with immediate data then output	1 1 0 0 i ₃ i ₂ i ₁ i ₀	0 1 0 0 P ₃ P ₂ P ₁ P ₀	2	2	P (P ₃ to P ₀) ← [P (P ₃ to P ₀)] ∨ i ₃ to i ₀	Take the logical OR of P (P ₃ to P ₀) and the immediate data i ₃ i ₂ i ₁ i ₀ and output the result to P (P ₃ to P ₀).	ZF

Mnemonic	Instruction code	D ₇ D ₆ D ₅ D ₄	D ₃ D ₂ D ₁ D ₀	Number of bytes	Number of cycles	Operation	Description	Affected status bits	Note
[Timer control instructions]									
WTTM0	Write timer 0	1 1 0 0	1 0 1 0	1	2	TIMER0 ← [M2 (HL)], (AC)	Write the contents of M2 (HL), AC into the timer 0 reload register.		
WTTM1	Write timer 1	1 1 0 0 1 1 1 1	1 1 1 1 0 1 0 0	2	2	TIMER1 ← (E), (AC)	Write the contents of E, AC into the timer 1 reload register A.		
RTIM0	Read timer 0	1 1 0 0	1 0 1 1	1	2	M2 (HL), AC ← (TIMER0)	Read out the contents of the timer 0 counter into M2 (HL), AC.		
RTIM1	Read timer 1	1 1 0 0 1 1 1 1	1 1 1 1 0 1 0 1	2	2	E, AC ← (TIMER1)	Read out the contents of the timer 1 counter into E, AC.		
START0	Start timer 0	1 1 0 0 1 1 1 0	1 1 1 1 0 1 1 0	2	2	Start timer 0 counter	Start the timer 0 counter.		
START1	Start timer 1	1 1 0 0 1 1 1 0	1 1 1 1 0 1 1 1	2	2	Start timer 1 counter	Start the timer 1 counter.		
STOP0	Stop timer 0	1 1 0 0 1 1 1 1	1 1 1 1 0 1 1 0	2	2	Stop timer 0 counter	Stop the timer 0 counter.		
STOP1	Stop timer 1	1 1 0 0 1 1 1 1	1 1 1 1 0 1 1 1	2	2	Stop timer 1 counter	Stop the timer 1 counter.		
[Interrupt control instructions]									
MSET	Set interrupt master enable flag	1 1 0 0 0 1 0 1	1 1 0 1 0 0 0 0	2	2	MSE ← 1	Set the interrupt master enable flag to one.		
MRESET	Reset interrupt master enable flag	1 1 0 0 1 0 0 1	1 1 0 1 0 0 0 0	2	2	MSE ← 0	Clear the interrupt master enable flag to zero.		
EIH i4	Enable interrupt high	1 1 0 0 0 1 0 1	1 1 0 1 i ₃ i ₂ i ₁ i ₀	2	2	EDIH ← (EDIH) ∨ i4	Set the interrupt enable flag to one.		
EIL i4	Enable interrupt low	1 1 0 0 0 1 0 0	1 1 0 1 i ₃ i ₂ i ₁ i ₀	2	2	EDIL ← (EDIL) ∨ i4	Set the interrupt enable flag to one.		
DIH i4	Disable interrupt high	1 1 0 0 1 0 0 1	1 1 0 1 i ₃ i ₂ i ₁ i ₀	2	2	EDIH ← (EDIH) ∧ i ₄ [̄]	Clear the interrupt enable flag to zero.	ZF	
DIL i4	Disable interrupt low	1 1 0 0 1 0 0 0	1 1 0 1 i ₃ i ₂ i ₁ i ₀	2	2	EDIL ← (EDIL) ∧ i ₄ [̄]	Clear the interrupt enable flag to zero.	ZF	
WTSP	Write SP	1 1 0 0 1 1 0 1	1 1 1 1 1 0 1 0	2	2	SP ← (E), (AC)	Transfer the contents of E, AC to SP.		
RSP	Read SP	1 1 0 0 1 1 0 1	1 1 1 1 1 0 1 1	2	2	E, AC ← (SP)	Transfer the contents of SP to E, AC.		
[Standby control instructions]									
HALT	HALT	1 1 0 0 1 1 0 1	1 1 1 1 1 1 1 0	2	2	HALT	Enter halt mode.		
HOLD	HOLD	1 1 0 0 1 1 0 1	1 1 1 1 1 1 1 1	2	2	HOLD	Enter hold mode.		
[Serial I/O control instructions]									
STARTS	Start serial I O	1 1 0 0 1 1 1 0	1 1 1 1 1 1 1 0	2	2	START S I O	Start SIO operation.		
WTSIO	Write serial I O	1 1 0 0 1 1 1 0	1 1 1 1 1 1 1 1	2	2	SIO ← (E), (AC)	Write the contents of E, AC to SIO.		
RSIO	Read serial I O	1 1 0 0 1 1 1 1	1 1 1 1 1 1 1 1	2	2	E, AC ← (SIO)	Read out the contents of SIO into E, AC.		
[Other instructions]									
NOP	No operation	0 0 0 0	0 0 0 0	1	1	No operation	Consume one machine cycle without performing any operation.		
SB i2	Select bank	1 1 0 0 1 1 0 0	1 1 1 1 0 0 i ₁ i ₀	2	2	PC13, PC12 ← i ₁ i ₀	Specify the memory bank.		

- No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
- Anyone purchasing any products described or contained herein for an above-mentioned use shall:
 - ① Accept full responsibility and indemnify and defend SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors and all their officers and employees, jointly and severally, against any and all claims and litigation and all damages, cost and expenses associated with such use:
 - ② Not impose any responsibility for any fault or negligence which may be cited in any such claim or litigation on SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors or any of their officers and employees jointly or severally.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of February, 1997. Specifications and information herein are subject to change without notice.
