

## DESCRIPTION

The AD4C541 is a bi-directional, double-pole, single-throw, normally open solid-state relay. This device consists of two discrete relays in a compact 8 pin package. Each relay is composed of a AlGaAs LED optically coupled to an IC--driving a pair of source-to-source enhancement type DMOS transistors. Low on-resistance allows for a high load current rating--making the AD4C541 ideal in applications where packaging density and high load current requirements present unique design challenges.

## FEATURES

- Low On-Resistance (1 ohm MAX)
- Low input control power consumption (2.5mA TYP)
- High load current rating (700mA MAX, single pole)
- High input-to-output isolation (2500V MIN)
- Long life/high reliability

## OPTIONS/SUFFIXES\*

- -H High Output Isolation
- -S Surface Mount Option
- -TR Tape and Reel Option

NOTE: Suffixes listed above are not included in marking on device for part number identification.

## SCHEMATIC DIAGRAM

## APPLICATIONS

- Reed relay replacement
- Meter reading systems
- Medical equipment
- Battery monitoring
- Multiplexers

## ABSOLUTE MAXIMUM RATINGS\*

PARAMETER	UNIT	MIN	TYP	MAX
Storage Temperature	°C	-55		125
Operating Temperature	°C	-40		85
Continuous Input Current	mA			40
Transient Input Current	mA			400
Reverse Input Control Voltage	V	6		
Output Power Dissipation	mW			800

\*The values indicated are absolute stress ratings. Functional operation of the device is not implied at these or any conditions in excess of those defined in electrical characteristics section of this document. Exposure to Absolute Ratings may cause permanent damage to the device and may adversely affect reliability.
