

SCCS028B - December 1987 - Revised September 2001

Features

- Ioff supports partial-power-down mode operation
- · Edge-rate control circuitry for significantly improved noise characteristics
- Typical output skew < 250 ps
- ESD > 2000V
- TSSOP (19.6-mil pitch) and SSOP (25-mil pitch) packages
- Industrial temperature range of -40°C to +85°C
- V_{CC} = 5V \pm 10%

CY74FCT16244T Features:

- 64 mA sink current, 32 mA source current
- Typical V_{OLP} (ground bounce) <1.0V at V_{CC} = 5V, $T_A = 25^{\circ}C$

CY74FCT162244T Features:

- Balanced output drivers: 24 mA
- · Reduced system switching noise
- Typical V_{OLP} (ground bounce) <0.6V at V_{CC} = 5V, T_A= 25 $^{\circ}C$

CY74FCT162H244T Features:

- Bus hold on data inputs
- · Eliminates the need for external pull-up or pull-down resistors

16-Bit Buffers/Line Drivers

Functional Description

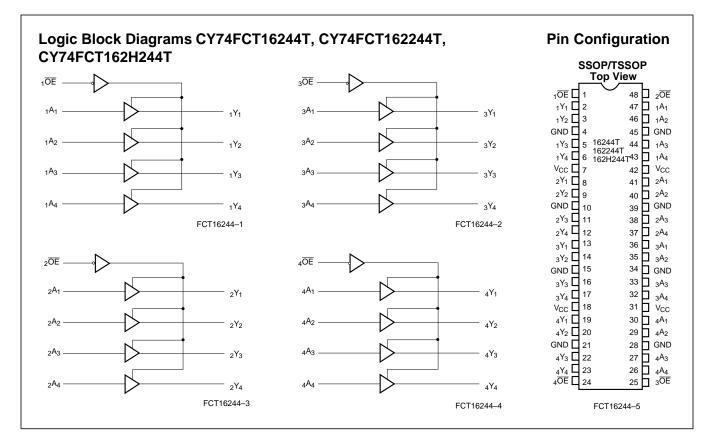

These 16-bit buffers/line drivers are designed for use in memory driver, clock driver, or other bus interface applications, where high-speed and low power are required. With flow-through pinout and small shrink packaging board layout is simplified. The three-state controls are designed to allow 4-bit, 8-bit or combined 16-bit operation.

This device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

The CY74FCT16244T is ideally suited for driving high-capacitance loads and low-impedance backplanes.

The CY74FCT162244T has 24-mA balanced output drivers with current limiting resistors in the outputs. This reduces the need for external terminating resistors and provides for minimal undershoot and reduced ground bounce. The CY74FCT162244T is ideal for driving transmission lines.

The CY74FCT162H244T is a 24-mA balanced output part that has "bus hold" on the data inputs. The device retains the input's last state whenever the input goes to high impedance. This eliminates the need for pull-up/down resistors and prevents floating inputs.

Notes:

1. 2.

On CY74FCT162H244T these pins have "bus hold." H = HIGH Voltage Level. L = LOW Voltage Level. X = Don't Care. Z = High Importance. Operation beyond the limits set forth may impair the useful life of the device. Unless otherwise noted, these limits are over the operating free-air temperature range. Unused inputs must always be connected to an appropriate logic voltage level, preferably either V_{CC} or ground. 3. 4.

Notes:

Typical values are at V_{CC}=5.0V, T_A = +25°C ambient.
This parameter is specified but not tested.
Pins with bus hold are described in Pin Description.
Not more than one output should be shorted at a time. Duration of short should not exceed one second. The use of high-speed test apparatus and/or sample and hold techniques are preferable in order to minimize internal chip heating and more accurately reflect operational values. Otherwise prolonged shorting of a high output may raise the chip temperature well above normal and thereby cause invalid readings in other parametric tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
Tested at +25°C.

Notes:

Notes: 10. Per TTL driven input ($V_{IN} = 3.4V$); all other inputs at V_{CC} or GND. 11. This parameter is not directly testable, but is derived for use in Total Power Supply calculations. 12. $I_C = I_{QC} + \Delta I_{CC} D_H N_T + I_{DYNAMC}$ $I_C = I_{CC} + \Delta I_{CC} D_H N_T + I_{CCD} (f_0/2 + f_1 N_1)$ $I_{CC} = Quiescent Current with CMOS input levels$ $I_{CC} = Power Supply Current for a TTL HIGH input (<math>V_{IN}$ =3.4V) $D_H = Duty Cycle for TTL inputs HIGH$ $N_T = Number of TTL inputs at D_H$ $I_{CC} = Down TTL inputs at D_H$

- I_{CCD} = Dynamic Current caused by an input transition pair (HLH or LHL)
- = Clock frequency for registered devices, otherwise zero f₀

= Input signal frequency f₁

N1 = Number of inputs changing at f1
All currents are in milliamps and all frequencies are in megahertz.
Values for these conditions are examples of the I_{CC} formula. These limits are specified but not tested.
