

- Transceiver for Memory Card Interface [MultiMediaCard (MMC), Secure Digital (SD), Memory Stick™ Compliant Products, SmartMedia Card, and xD-Picture Card™]
- Configurable I/O Switching Levels With Dual-Supply Pins Operating Over Full 1.4-V to 3.6-V Power-Supply Range
- For Low Power Operation, A Ports Are Placed in High-Impedance State When Card-Side Supply Voltage Is Switched Off
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection for Card-Side Pins (B Port)
 - ±15 kV (±12 kV on Pin 14B) - IEC 61000-4-2 ESD, Air Gap Discharge
 - ±8 kV - IEC 61000-4-2 ESD, Contact Discharge
- ESD Protection for A-Port Pins (Tested Per JESD 22) Exceeds:
 - 2000-V Human-Body Model (A114-B)
 - 1000-V Charged-Device Model (C101)

description/ordering information

The SN74AVCA406 is a transceiver for interfacing microprocessors with MultiMediaCards (MMCs), secure digital (SD) cards, Memory Stick™ compliant products, SmartMedia cards, or xD-Picture Cards™. It integrates high ESD protection, which eliminates the need for external ESD diodes. Two supply-voltage pins allow the A-port and B-port input switching thresholds to be configured separately. The A port is designed to track V_{CCA} , while the B port is designed to track V_{CCB0} and V_{CCB1} . V_{CCA} , V_{CCB0} and V_{CCB1} can accept any supply voltage from 1.4 V to 3.6 V.

Memory card standards recommend high ESD protection for devices that connect directly to the external memory card. To meet this need, the SN74AVCA406 incorporates ±15-kV air gap discharge and ±8-kV contact discharge protection on the card side. If V_{CCB0} and V_{CCB1} are switched off (no card inserted), the A-port outputs are placed in the high-impedance state to conserve power.

The SN74AVCA406 enables system designers to easily interface low-voltage microprocessors to different memory cards operating at higher voltages. The mode (MODE0 and MODE1) pins are used to configure the device to interface with different types of cards.

The SN74AVCA406 is offered in the 48-ball MicroStar Jr.™ ball grid array (BGA) package. This package has dimensions of 4 × 4 mm, with a 0.5-mm ball pitch for effective board-space savings. Memory cards are widely used in mobile phones, PDAs, digital cameras, personal media players, camcorders, set-top boxes, etc. Low static power consumption and small package size make the SN74AVCA406 an ideal choice for these applications.

| G | V _{CCA} | 5A | 11A | CS1 | 8B | 6B | V _{CCB1} |

V_{CCA} powers all A-port I/Os and control inputs.

V_{CCB0} powers 1B, 2B, 3B, 4B, 9B1, and 10B1.

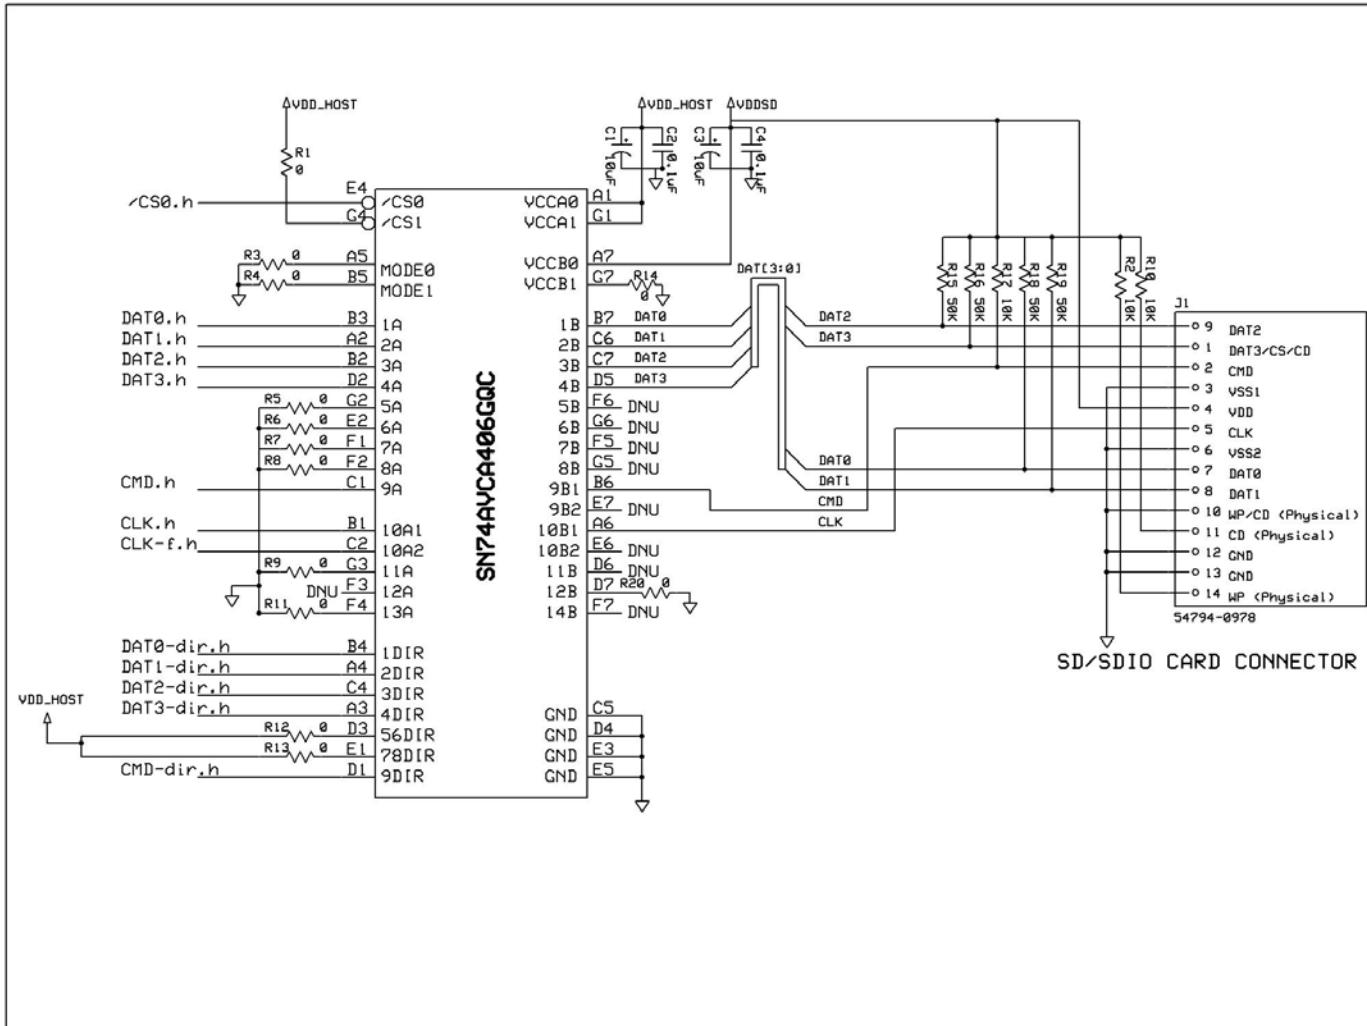

V_{CCB1} powers 5B, 6B, 7B, 8B, 9B2, 10B2, 11B, 12B, and 14B.

device operation

The A port is designed to track V_{CCA}. V_{CCA} accepts any supply voltage from 1.4 V to 3.6 V. The B port is designed to track V_{CCB0} and V_{CCB1}. V_{CCB0} and V_{CCB1} can accept any supply voltage from 1.4 V to 3.6 V, however, V_{CCB0}, V_{CCB1}, or both must be greater than or equal to V_{CCA} during normal operation. If V_{CCB0} and V_{CCB1} are both at GND, the A port is in the high-impedance state. The control pins are supplied by V_{CCA}. The microprocessor is connected to the A port, and the memory card(s) are connected to the B port. The device can be configured using MODE0, MODE1, CS0, and CS1 pins to interface with 1-bit, 4-bit, or 8-bit memory cards. Outputs 12A and 14B are push-pull and open drain (OD), respectively, except for NAND flash (XD) mode, where they are open drain and push-pull, respectively.

±15-kV ESD-PROTECTED VOLTAGE-TRANSLATION TRANSCEIVER

SCES615B – OCTOBER 2004 – REVISED DECEMBER 2004

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

| | |
|--|-----------------------------|
| Supply voltage range, V_{CCA} and V_{CCB} | -0.5 V to 4.6 V |
| Input voltage range, V_I (see Note 1): I/O ports (A port) | -0.5 V to $V_{CCA} + 0.5$ V |
| I/O ports (B port) | -0.5 V to $V_{CCB} + 0.5$ V |
| Control inputs | -0.5 V to 4.6 V |
| Voltage range applied to any output in the high-impedance or power-off state, V_O (see Note 1): A port | -0.5 V to $V_{CCA} + 0.5$ V |
| B port | -0.5 V to $V_{CCB} + 0.5$ V |
| Voltage range applied to any output in the high or low state, V_O (see Notes 1 and 2): A port | -0.5 V to $V_{CCA} + 0.5$ V |
| B port | -0.5 V to $V_{CCB} + 0.5$ V |
| Input clamp current, I_{IK} ($V_I < 0$) | -50 mA |
| Output clamp current, I_{OK} ($V_O < 0$) | -50 mA |
| Continuous output current, I_O | ±50 mA |
| Continuous current through V_{CCA} , V_{CCB} , or GND | ±100 mA |
| Package thermal impedance, θ_{JA} (see Note 3) | 34°C/W |
| Storage temperature range, T_{stg} | -65°C to 150°C |

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input voltage and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
2. The output positive-voltage rating may be exceeded up to 4.6 V maximum if the output current rating is observed.
3. The package thermal impedance is calculated in accordance with JESD 51-7.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

recommended operating conditions (see Notes 4 through 7)

| | | V _{CCI} | V _{CCO} | MIN | MAX | UNIT |

- NOTES:
- A. C_L includes probe and jig capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
 - C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_O = 50\ \Omega$, dv/dt $\geq 1\text{ V/ns}$.
 - D. The outputs are measured one at a time, with one transition per measurement.
 - E. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
 - F. t_{PZL} and t_{PZH} are the same as t_{en} .
 - G. t_{PLH} and t_{PHL} are the same as t_{pd} .
 - H. V_{CCI} is the V_{CC} associated with the input port.
 - I. V_{CCO} is the V_{CC} associated with the output port.

MMC, SD CARD, Memory Stick™, SmartMedia, AND xD-Picture Card™

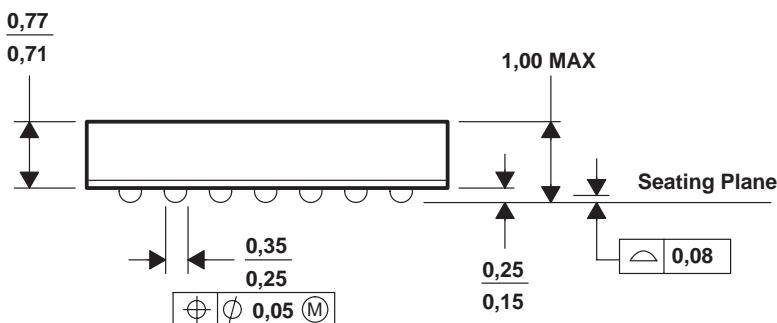

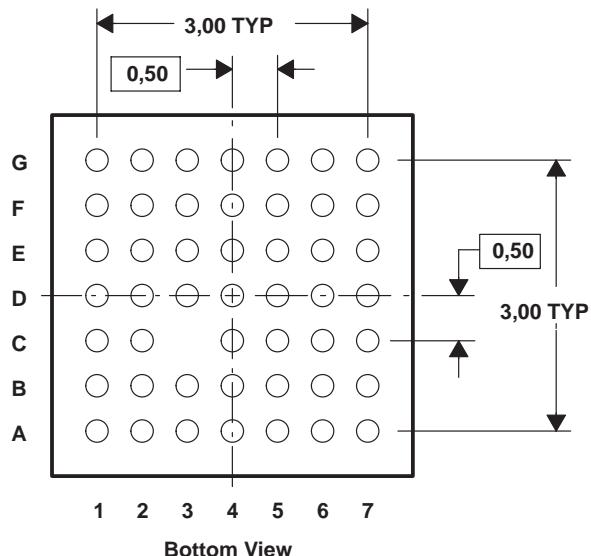

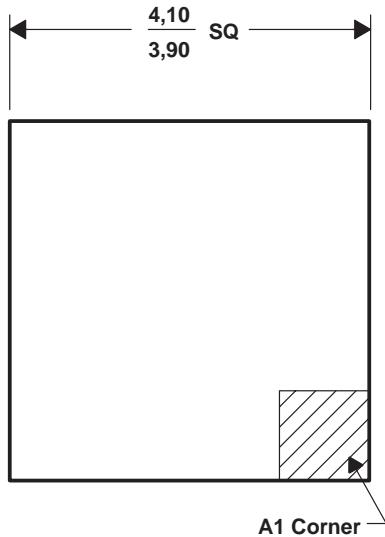

±15-kV ESD-PROTECTED VOLTAGE-TRANSLATION TRANSCEIVER

SCES615B – OCTOBER 2004 – REVISED DECEMBER 2004

MECHANICAL DATA

GQC (S-PBGA-N48)

PLASTIC BALL GRID ARRAY

4200460/E 01/02

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. MicroStar Jr.™ BGA configuration
 - D. Falls within JEDEC MO-225

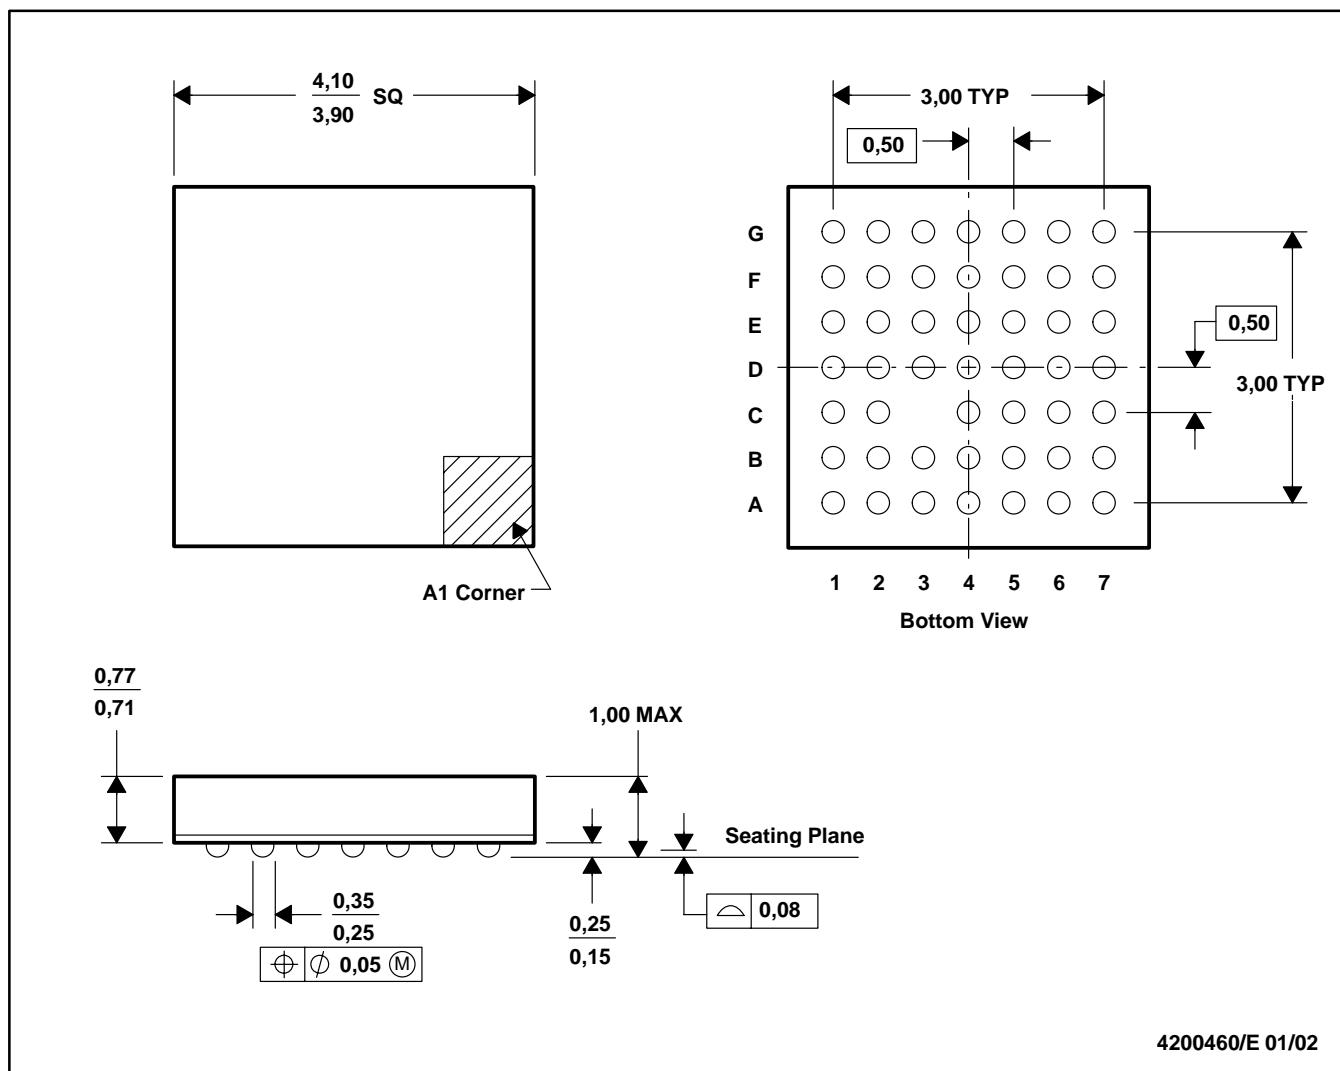

MicroStar Jr. is a trademark of Texas Instruments.

PLASTIC BALL GRID ARRAY

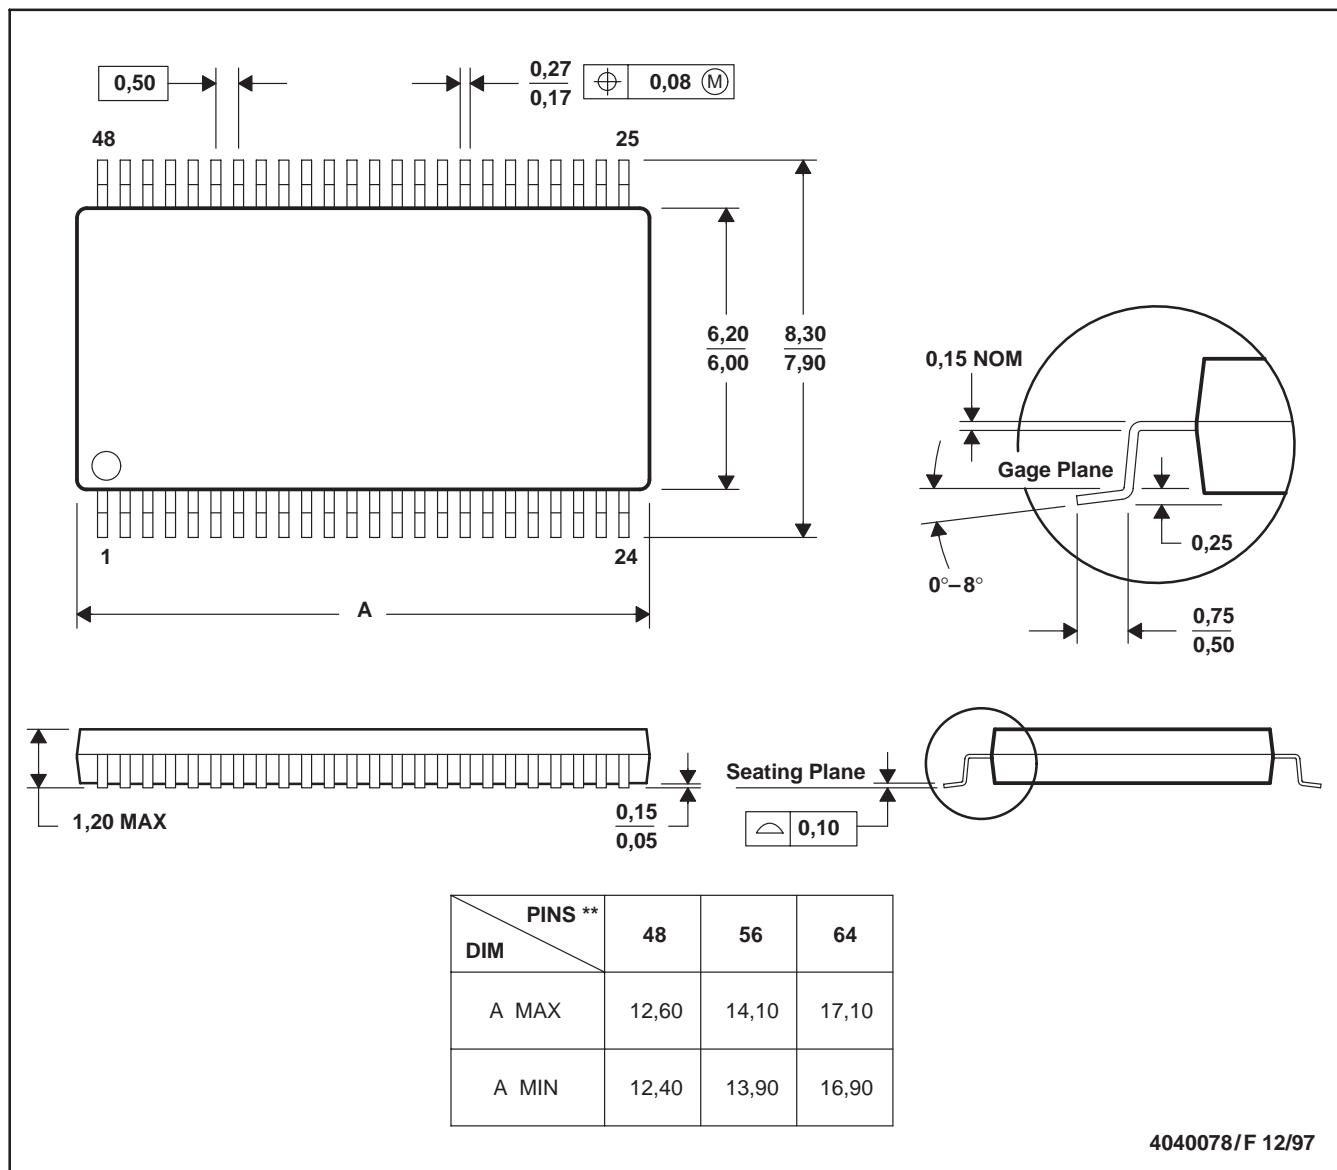

MicroStar Junior is a trademark of Texas Instruments.

DGG (R-PDSO-G**)

PLASTIC SMALL-OUTLINE PACKAGE

48 PINS SHOWN

- NOTES: A. All linear dimensions are in millimeters.
 B. This drawing is subject to change without notice.
 C. Body dimensions do not include mold protrusion not to exceed 0,15.
 D. Falls within JEDEC MO-153

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
