# Low Voltage Differential (LVD/SE) SCSI 9 Line Terminator

## FEATURES

- Auto Selection Multi-Mode Single Ended or Low Voltage Differential Termination
- 3.0V to 5.25V Operation
- Differential Failsafe Bias
- Thermal Packaging for Low Junction Temperature and Better MTBF
- Master/Slave Inputs
- Supports Active Negation
- 3pF Channel Capacitance

# DESCRIPTION

The UCC5510 Multi-Mode Low Voltage Differential and Single Ended Terminator is specially designed for automatic termination of Single-Ended or Low Voltage Differential SCSI Bus. The Multi-Mode operation of this device allows for a transition system design for the next generation SCSI Parallel Interface (SPI-2). Compliant with SPI-2, with SPI and Fast-20 the UCC5510 incorporates all the functions necessary to properly terminate the SCSI Bus and has internal thermal shut down and short circuit limiting.

## **ABSOLUTE MAXIMUM RATINGS**

TRMPWR Voltage	6V
Signal Line Voltage	0V to TRMPWR
Package Power Dissipation	2W
Storage Temperature	–65°C to +150°C
Junction Temperature	–55°C to +150°C
Lead Temperature (Soldering, 10sec.)	+300°C

#### **RECOMMENDED OPERATING CONDITIONS**

TRMPWR Voltage ..... 3.0V TO 5.25V

All voltages are with respect to pin 1. Currents are positive into, negative out of the specified terminal. Consult Packaging Section of the Databook for thermal limitations and considerations of packages.

#### **PIN DESCRIPTIONS**

**DIFFB:** DIFF SENSE filter pin should be connected to a  $0.1\mu$ F capacitor to GND and 20k resistor to SCSI/Bus DIFF SENSE Line.

**DIFFSENS:** The SCSI bus DIFF SENSE line is driven to 1.3V to detect what type of devices are connected to the SCSI bus.

**HS/GND:** Heat Sink GND. Connect to large area PC board traces to increase power dissipation capability.

GND: Power Supply Return.

L1- thru L9-: Signal line/active line for single ended or

negative line in differential applications for the SCSI bus.

**L1+ thru L9+:** Ground line for single ended or positive line for differential applications for the SCSI bus.

**MSTR/SLV:** Mode select for the non-controlling terminator. MSTR enables the 1.3V regulator, when the terminator is enabled. *Note:* This function will be removed on further generations of the multimode terminators.

**REG:** Regulator bypass, must be connected to a  $4.7\mu$ F capacitor.

TRMPWR: V<sub>IN</sub> 3.0V to 5.25V supply.

#### **APPLICATION INFORMATION**

Figure 1. Application Drawing

The master is selected by placing TRMPWR on MSTR/SLV and enabling the 1.3V regulator. The master is the only terminator connected directly to the DIFF-SENS bus line. All the other terminators receive a mode signal by connecting the DIFFB pins together.

The balancing capacitor is very important during high speed operation. The typical capacitor balance between the positive (+) and negative (-) signals is 0.1pF, except

in the MWP package where between L8 and L9 the balance is 0.23pF and 0.4pF respecitvely The negative (–) signal line has a higher capacitance than the positive (+) signal line. The FQP package has typically 0.2pF less capacitance than the MWP package, where the typical balance is 0.1pF except for L8 and L3, where the balance is 0.4pF.

Note: The master/slave function will not be included in future Unitrode terminators.
